GOVERNMENT OF MAHARASHTRA

REPORT ON

"SURVEY OF PERSONS WITH DISABILITIES"
(SUB-STATE LEVEL RESULTS)

BASED ON POOLED DATA OF CENTRAL AND STATE SAMPLE OF NSS 76TH ROUND

(JULY, 2018 - DECEMBER, 2018)

Directorate of Economics and Statistics, Planning Department,
Government of Maharashtra,
Mumbai

PREFACE

National Statistical Office (NSO) conducted a nation-wide survey on 'survey of persons with disabilities' in 76th round during July, 2018 to December, 2018. The **Directorate of Economics & Statistics, Govt. of Maharashtra**, like previous rounds participated in this survey with equal matching sample in rural areas and one and half times sample in urban areas in respect of State sample.

The present report on 'Survey of persons with disabilities' is based on result of **pooled data of Central and State sample**. The technical assistance provided by NSO, Government of India and the cooperation extended by the sample households is acknowledged.

I use this opportunity to place on record the work done by the field staff, supervisory staff of DES who worked hard to make the survey a success and all other officers & staff attached to the National Sample survey Division at the Head office, Regional offices, District offices and officers at EDP centre of this Directorate who have contributed in different ways to the success of the survey and the subsequent production of the report. Report is published by the consent of technical expert committee constituted for validating NSS reports relating to state sample and pooled sample. I also thank the technical committee members for their contribution in validating the report.

I hope, this report will be useful to the planners, policy makers, academicians and researchers. Suggestions for improvement of the content of the report will be highly appreciated.

(Vijay Aher)
Director
Directorate of Economics & Statistics,
Planning Department,
Government of Maharashtra

Place - Mumbai
Date – June, 2023

Detail Involvement from Data Collection to Report Preparation

1. Data collection of State sample by district level Investigators

2. Supervision by Regional Joint Directors, Deputy Director (NSS), Statistical Officers(I) and Statistical Assistants(I)

3. Data Entry and Validation (State sample) by District level Investigators and Statistical Assistants

4. Pooling Exercise using software provided by NSO

5. Estimation and report writing:

   Mrs. U. M. Hirijaganer, Research Officer, DES, Maharashtra

   Shri. Sachin Kanekar, Assistant Research Officer, DES, Maharashtra

6. Report Verification

   Mrs. Rupali Thote, Joint Director, DES Maharashtra
   Mrs. A. L. Kadam, Deputy Director, DES Maharashtra

7. Report Validation
   Members of Technical Committee

8. Guidance by
   Mr. Vijay Aher, Director, DES Maharashtra
   Dr. J. V. Chaudhary, Additional Director, DES Maharashtra
   Mr. P.H. Bhagoorkar, Additional Director, DES Maharashtra

9. Final Approval
   Mr. Vijay Aher, Director, DES Maharashtra

Highlights of the results

The estimates based on the pooled data of Central and State sample of 'Survey of persons with disabilities' of the NSS 76th round conducted during July, 2018 to December, 2018 are presented in this report. For this survey 775 sample villages and 975 urban blocks (pooled sample) were surveyed. Some of the important findings are as stated below:

- In the State, prevalence of disability (percentage of persons with disability in the population) was 1.9. This was 2.1 per cent in rural areas and 1.6 per cent in urban areas.

- About 6.3 per cent persons in higher age groups 60 years & above were disabled.

- Among persons with disabilities of age 7 years and above, 64.8 per cent were literates.

- About 90 per cent disabled persons (Rural- 88.1 per cent and Urban- 93.6 per cent) had taken/ undergoing treatment.

- Among persons with disabilities of age 15 years and above, Labour Force Participation Rate in usual status (ps+ss) was 25.0 per cent (Rural-26.9 per cent and Urban-21.7 per cent).

- Among persons with disabilities of age 15 years and above, Worker Population Ratio in usual status (ps+ss) was 26.2 per cent.

  (ps+ss - principal status + subsidiary status)

CHAPTER – 1

INTRODUCTION

CHAPTER – 1

Introduction

Background

1.1 The National Statistical Office (NSO), GoI conducts nationwide socio-economic surveys at regular intervals as part of its 'rounds', each round normally of one year duration. The NSS surveys are conducted through interviews of a random sample of households selected through a scientific design and cover the entire geographical area of the country.

1.2.1 The NSO conducted a nation-wide survey on 'Survey of persons with disabilities' in its 76th round during July, 2018 to December, 2018. The objective of this survey was to generate basic quantitative information on disability. The information on persons with disabilities was collected for the first time by the then National Sample Survey Organisation (NSSO) in the 15th round during July, 1959- June, 1960. Then NSO undertook a comprehensive survey of persons with disabilities in its 36th round (July, 1981- December, 1981), 47th round (July, 1991- December, 1991) and 58th round (July, 2002- December, 2002).

1.2.2 In this survey, following information was collected from selected households

(i) Prevalence of different broad types of disabilities

(ii) Status of education and vocational/ technical training among persons with disabilities

(iii) Age at onset of disability and incidence of disability

(iv) Cause of disability, treatment for disability and aid/ appliances

(v) Living arrangement, care giver, receipt of aid/ help, difficulty in accessing / using public transport/ public building and certificate of disability

(vi) Employment & unemployment among persons of age 15 years & above with disability in usual status

1.2.3 For this survey, for classification of disabilities, specified disabilities as stated in the Persons with Disabilities Act, 2016 have been considered. The detailed categories of the disabilities on which information was collected in this survey were as follows:

1) Locomotor disability	(i) acid attack victims
	(ii) leprosy cured person
	(iii) polio
	(iv) cerebral palsy
	(v) dwarfism
	(vi) muscular dystrophy
	(vii) other locomotor disability
(2) Visual disability	(viii) blindness
	(ix) low vision

(3) Hearing disability	(x) hearing disability
(4) Speech and language disability	xi) speech and language disability
(5) Mental retardation/ intellectual disability	(xii) specific learning disabilities
	(xiii) Autism Spectrum Disorder
	(xiv) other mental retardation/ intellectual disability
(6) Mental illness	(xv) mental illness
(7) Other disabilities	(a) chronic neurological conditions
	(xvi) parkinson's disease
	(xvii) multiple sclerosis
	(xviii) other chronic neurological conditions,
	(b) blood disorder
	(xix) thalassemia
	(xx) haemophilia
	(xxi) sickle cell disease
(8) Multiple Disabilities	(xxii) more than one of the above specified disabilities including deaf blindness

State's participation in NSS surveys

1.3 Maharashtra state has been participating in the NSS surveys from 9th round onwards by using the same concepts, definitions and procedures and by adopting the same sample design. The survey is conducted in independently drawn sample as that of NSO called as the State sample. The sample size of the State sample in Maharashtra for rural areas is equal to that of Central sample and for urban areas, it is one and half times of the Central sample. The State sample list is supplied by NSO. District wise sample size of 76th round is given in Table-1.

1.4 One of the objectives of State's participation in the NSS programme is to provide a mechanism by which sample size will be increased and by pooling the two sets of Central and State data better estimates at sub state level, particularly at district level can be obtained. At the State level, this will result in increased precision of the estimates and at disaggregated level, estimates will be more stable.

Emerging need for pooling of Central and State samples

1.5 The 73rd and 74th constitutional amendments (1992) have brought into existence the democratically elected grassroot institutions of local self-governance, with respective delegated functions, both in rural and urban areas. This has enhanced the demand for local level statistics and necessitated requirement of developing basic capabilities at grass root levels to organize such statistics in a harmonious manner. In this context, it is envisioned that the survey resources in overall NSS programme both by Central and State Agencies can be more effectively utilised to generate lower level estimates of key indicators, in particular at district level. In the report of 13th Finance Commission, it is noted that comparable estimates of district income are extremely relevant for

measuring intra-state income disparities. This will enable State Governments to effectively plan policy and programme interventions. They could also be used as a parameter for horizontal distribution of fiscal transfers. The Commission also recommended for granting finance to State Governments, which should be utilised by them for strengthening statistical infrastructure at the district level. These requirements are subsequently brought in institutional framework in the implementation of the 13th Finance Commission.

National Statistical Commission's (NSC) Recommendation

1.6 The National Statistical Commission in its report has observed the importance of pooling in the statement:

> ***"The statistical agencies of different State governments have been participating in the NSS programme and canvassing the same questionnaires in matched samples of households in their respective States following identical concepts, definitions and procedures. Results from the central samples and state sample(s) have occasionally been compared. The main purpose of the programme is to pool the two samples and obtain dependable estimates for regions within the States."***

1.7 National Statistical Commission (NSC) constituted the committee on pooling of Central and State samples in National Sample Surveys (NSS) under the chairmanship of Prof. R. Radhakrishna vide order no. 8(64)/2010-NSC, 30th July, 2010. The terms of reference of the committee are as follows :-

- Conditions to be fulfilled for pooling of Central and State Sample NSS data.
- Methodology for pooling.
- Time frame by which the exercise needs to be completed by each State.
- Generating weighting diagrams from the pooled data at sub-state level for the purpose of consumer price indices (Rural and Urban) including occupation specific indices such as CPIAL, CPIIW etc. from the NSS data on consumer expenditure surveys (quinquennial & thin sample).

The committee submitted its report to the NSC in November, 2011. The committee has given its recommendations in respect of following main aspects involved in pooling.

1. Indicators to be pooled at sub-state level
2. Scope of poolability and measures to improve the poolability of central and state data
3. Methodology of pooling
4. Suitable augmentation of the sample size of central sample data, which will also strengthen the precision of pooled data

Assistance of NSO (DPD) for processing of NSS State Sample Data

1.8 Since NSO develops its own in-house software for processing the Central sample data, in the deliberations of Conference of Central and State Statistical organisations (COCSSO), it was recommended that NSO should assist the States in terms of providing common Data Entry Software, Tabulation Software, Instructions Manual and Training and Hands on Practice to DES personnel. NSO has already started providing this assistance to States.

1.9 The harmonisation of data processing process is one of the key essences for pooling the different sets of data. The State sample data should be processed using the same set of validation rules as in the case of Central sample data. Accordingly, it is essential that the State sample data is processed, ensuring the use of same data entry layout as in the case of Central sample. If the States are evolving their own data layout, as per their convenience, then the State data should be put in the layout, harmonising that with the Central data for using the same software developed for Central samples.

Parameters Considered for Pooling

1.10 DES, Govt. of Maharashtra has collected information on 'Survey of persons with disabilities' during the period July, 2018 to December, 2018. The state sample data cannot be used directly to produce reliable estimates at the district level due to small sample sizes. Pooling of Central and State sample data is one of the important ways to solve the problem of inadequate sample size for releasing district level estimates. By pooling NSS 76th round Central and State sample data, estimates of some key indicators in Maharashtra at the regional/ district level have been derived and are presented in this report. Considering the small sample size at district level following broad parameters were considered for pooling.

- Distribution of disabled persons by age group
- Literacy rate among persons with disabilities of age 7 years and above
- Distribution of persons with disability by status of treatment taken
- Persons with disabilities incurring out-of-pocket expenses and average monthly out-of-pocket expenses
- Distribution of persons of age group 15 years and above by activity status in usual status (ps+ss)

Sample Size of Maharashtra

1.11 The sample size of Central and State samples for Maharashtra state is as follows

Sector	Central Sample		State Sample	
	FSU surveyed	Households surveyed	FSU surveyed	Households surveyed
Rural	388	6493	387	5446
Urban	390	3719	585	5250

Abbreviations used in this Report

RSE : Relative Standard Error
IV : Inverse of Variance
MR : Matching Ratio

CHAPTER – 2

SAMPLE DESIGN, CONCEPTS & DEFINITIONS

CHAPTER – 2

SAMPLE DESIGN, CONCEPTS & DEFINITIONS

2.1. Introduction

2.1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its seventy sixth round from 1st July 2018 to 31st December 2018.

2.1.2 Subject Coverage: NSS 76th round covered the subjects 'Drinking water, Sanitation, Hygiene and Housing Condition' and 'Persons with Disabilities'.

2.2. Outline of Survey Programme

2.2.1 Geographical coverage: The survey covered whole of Maharashtra state.

2.2.2 Period of survey and work programme: The survey period was of six months' duration. There was no sub-round restriction in the sample design of this round.

2.2.3 Schedules of enquiry: During this round, the following schedules of enquiry were canvassed:

Schedule 0.0 : list of households
Schedule 1.2 : drinking water, sanitation, hygiene and housing condition
Schedule 26 : survey of persons with disabilities

2.3. Sample Design

2.3.1 Formation of sub-units (SUs):

2.3.1.1 Rural areas: In usual NSS rounds, large sample villages were divided into a number of sub-divisions called hamlet-groups based on population (approximate present population) of the villages during survey. This procedure was modified in this round. During this round, a rural village was notionally divided into a number of sub-units (SU) of more or less equal population during the preparation of frame. Census 2011 population of villages was projected by applying suitable growth rates and the number of SUs formed in a village was determined apriori.

2.3.1.2 The above procedure of SU formation was implemented in the villages with population more than or equal to 1000 as per Census 2011. In the remaining villages, no SU was formed.
2.3.1.3 The number of SUs formed in the villages (with Census 2011 population 1000 or more) of the frame was decided before selection of the samples following the criteria given below:

projected population of the village	no. of SUs formed
less than 1200	1
1200 to 2399	2
2400 to 3599	3
3600 to 4799	4
4800 to 5999	5
.....and so on	

2.3.1.4 Urban areas: SU's were formed in urban sector also. The procedure was similar to that adopted in rural areas except that SUs were formed on the basis of households in the UFS frame instead of population, since UFS frame does not have population. Each UFS block with number of households more than or equal to 200 was divided into a number of SUs. In the remaining UFS blocks, no SU was formed.

2.3.2 Outline of sample design: A stratified two stage design has been adopted for the 76th round survey. The first stage units (FSU) were villages/UFS blocks/sub-units (SUs) as per the situation. The ultimate stage units (USU) were households in both the sectors.

2.3.3 Sampling Frame for First Stage Units:

2.3.3.1 There was no SU formation in uninhabited villages and villages with population less than 1000 as per Census 2011 and entire village was considered as one FSU. All such villages were the First Stage Units (FSUs).

2.3.3.2 In the remaining villages, notional sub-units (SUs) following the procedure as described in para 2.3.1.1 were formed. Such SUs were considered as First Stage Units (FSUs).

2.3.3.3 For the UFS blocks with less than 200 households, the entire UFS block was considered as one FSU. In the remaining UFS blocks, the SUs were considered as First Stage Units (FSUs).

2.3.3.4 List of FSUs as described above was the sampling frame for respective cases.

2.3.4 Stratification:

(a) Each district was a stratum. Within each district of a State, generally speaking, two basic strata were formed: (i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, within the urban areas of a district, if there were one or more towns with population one million or more as per Census 2011, each of them formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum.

(b) A special stratum, in the rural areas only, was formed at State level before district level strata were formed in each State. This stratum comprised all the uninhabited villages of the State as per Census 2011. However, this special stratum was formed if at least 50 such villages were available in a State.

2.3.5 Sub-stratification:

2.3.5.1 Rural sector: Two groups of villages were formed within each stratum

Group 1: all villages with Census 2011 population less than 1000

Group 2: remaining villages

In both the groups, number of sub-strata was formed in the following manner:

The sample size for a rural stratum was allocated among 2 groups in proportion to population. Let r1 and r2 be the allocations to Group 1 and Group 2 respectively. The villages within each group

were first arranged in ascending order of population. Then 'r1/2' and 'r2/2' sub-strata were demarcated in Group 1 and Group 2 respectively in such a way that each sub-stratum comprised of a group of villages (all SUs of a village considered together) of the arranged frame and had more or less equal population. Sub-stratum numbers in Group 2 started from 11. If number of villages in Group 1 was very small, no sub-stratum was formed.

2.3.5.2 Urban sector: Let 'u' be the sample size allocated for an urban stratum. For all strata, if 'u/2' >1, implying formation of 2 or more sub-strata, all the UFS blocks within the stratum were first arranged in ascending order of total number of households in the UFS blocks as per urban frame. Then sub-strata were demarcated in such a way that each sub-stratum comprised a group of UFS blocks (all SUs within the block taken together) having more or less equal number of households.

2.3.6 Total sample size (FSUs): For Maharashtra state 976 FSUs were allotted for the State sample.

2.3.7 Allocation of total sample to States and UTs: The total number of sample FSUs were allocated to the States and UTs in proportion to population as per Census 2011 subject to a minimum sample allocation to each State/UT.

2.3.8 Allocation of State/ UT level sample to rural and urban sectors: State/UT level sample size was allocated between two sectors in proportion to population as per Census 2011 with 1.5 weightage to urban sector. A minimum of 4 FSUs, each for rural and urban sector separately, have been allocated to each State/UT. For more urbanised big States like Maharashtra, Tamil Nadu etc., the urban allocation was limited to rural sample size to avoid undue weightage to urban sector.

2.3.9 Allocation to strata: Within each sector of a State/ UT, the respective sample size was allocated to the different strata in proportion to the population as per Census 2011. Stratum level allocation was adjusted to multiples of 2 with a minimum sample size of 2. For special stratum formed at state level as mentioned in para 3.4(b), 2 FSUs were allocated.

2.3.10 Allocation to sub-strata:

2.3.10.1 Rural: Allocation was 2 for each sub-stratum.

3.10.2 Urban: Allocation was 2 for each sub-stratum for urban sector.

2.3.11 Selection of FSUs within a stratum/sub-stratum:

2.3.11.1 From all the sub-strata of Group 1 within each stratum of rural sector, required number of FSUs was selected by Probability Proportional to Size With Replacement (PPSWR) scheme with Census 2011 population as size.
2.3.11.2 From the remaining sub-strata of a rural stratum, and all sub-strata in urban sector within each stratum, required number of FSUs was selected by Simple Random Sampling With Replacement (SRSWR) scheme.

2.3.11.3 FSUs were selected by Simple Random Sampling With Replacement (SRSWR) scheme in the special stratum formed in rural sector at the State/UT level.

2.3.11.4 No sub-sample wise selection was done in this round and FSUs were selected in the form of single sample only.

2.3.12 Formation of sub-units and listing of households

2.3.12.1 Procedure of formation of SUs: After identification of the boundaries of the village/ UFS block which contains the sample FSU, the village/ UFS block was to be divided into the number of SUs (say, D) as given in the sample list by more or less equalising the present population of the village/UFS block in which the sample FSUs were located. It was ensured that SUs formed are clearly identifiable in terms of physical landmarks. For villages/blocks where the number of SUs to be formed was 1 as per the sample list, no SU formation is required.

2.3.12.2 Listing of households: All the households of the sample FSU were listed. Temporarily locked households were also listed after ascertaining the temporariness of locking of households through local enquiry.

2.3.13 Formation of second stage strata (SSS) and allocation of households in different SSS:

2.3.13.1 Schedule 26 (Survey of persons with disabilities): Different types of disabilities have been identified in "Rights of Persons with Disability" Act 2016, some of which are of very rare type.

Considering the types of disabilities and their rarity, a suitable strategy for SSS formation was adopted. The households were grouped into seven second stage strata (SSS) in the following manner:

SSS no.	Composition of SSS	Disability Group	Allocation of households
1	households having person(s) with any of the 11 rare disabilities: (i) acid attack victims, (ii) autism spectrum disorder, (iii) cerebral palsy, (iv) dwarfism, (v) haemophilia, (vi) multiple sclerosis, (vii) muscular dystrophy, (viii) other chronic neurological conditions, (ix)Parkinson's disease, (x) sickle cell disease, (xi)thalassemia	I	8
2	from the remaining, households having at least one person with mental disability	II	10
3	from the remaining, households having at least one person with speech disability		
4	from the remaining, households having at least one person with visual disability		
5	from the remaining, households having at least one person with hearing disability		
6	from the remaining, households having at least one person with locomotor disability		
7	households without any disability	No disability	2

2.3.14 Selection of households: The sample households from each SSS for each of the schedules were selected by SRSWOR.

2.4. Estimation Procedure

2.4.1 Notations:

s = subscript for s-th stratum
t = subscript for t-th sub-stratum
i = subscript for i-th FSU [SU/ village (panchayat ward)/ block]
j = subscript for j-th second stage stratum in an FSU
k = subscript for k-th sample household within an FSU
N = total number of FSUs in any rural/urban sub-stratum
Z = total size of villages in a rural sub-stratum (where villages are selected as FSUs i.e. substratum numbers 01 - 10)
z = size of sample FSU used for selection in sub-stratum numbers 01 - 10
n = number of sample FSUs surveyed including 'uninhabited' and 'zero cases' but excluding casualty for a particular sub-stratum
H = total number of households listed in a second-stage stratum of an FSU
h = number of households surveyed in a second-stage stratum of an FSU

x, y = observed value of characteristics x, y under estimation
X^, Y^ = estimate of population total X, Y for the characteristics x, y

Under the above symbols,
ystijk = observed value of the characteristic y for the k-th household of the j-th second stage stratum of the i-th FSU for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs

2.4.2 Formulae for Estimation of Aggregates for a stratum x sub-stratum:

2.4.2.1 Schedules 1.2, 26:

2.4.2.1.1 Rural:

2.4.2.1.1.1 Case 1: Sub-strata of special stratum (i.e. stratum = 99 and sub-stratum = 01)

(i) For j-th second-stage:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{ij}}{h_{ij}} \sum_{k=1}^{h_{ij}} y_{ijk} \right]$$

2.4.2.1.1.2 Case 2: Sub-strata of Group 1 villages (sub-stratum number: 01, 02, ... ,10)

(i) For j-th second-stage stratum of a stratum x sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j}\sum_{i=1}^{n_j}\frac{1}{z_i}\left[\frac{H_{ij}}{h_{ij}}\sum_{k=1}^{h_{ij}} y_{ijk}\right]$$

2.4.2.1.1.3 Case 3: Sub-strata of Group 2 villages (sub-stratum number: 11 onwards)

(i) For j-th second-stage stratum of a stratum x sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j}\sum_{i=1}^{n_j}\left[\frac{H_{ij}}{h_{ij}}\sum_{k=1}^{h_{ij}} y_{ijk}\right]$$

2.4.2.1.1.4 For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

2.4.2.1.2 Urban:

2.4.2.1.2.1 (i) For j-th second-stage stratum of a stratum x sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j}\sum_{i=1}^{n_j}\left[\frac{H_{ij}}{h_{ij}}\sum_{k=1}^{h_{ij}} y_{ijk}\right]$$

(ii)For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

2.4.3 Overall Estimate for Aggregates for a stratum:

Overall estimate for a stratum ($\hat{Y}_s$) will be obtained as

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

2.4.4 Overall Estimate of Aggregates at State:

The overall estimate $\hat{Y}$ at the State level is obtained by summing the stratum estimates $\hat{Y}_s$ over all strata belonging to the State.

2.4.5 Estimates of Ratios:

Let $\hat{Y}$ and $\hat{X}$ be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State level.

Then the combined ratio estimate ($\hat{R}$) of the ratio $\left(R = \frac{Y}{X}\right)$ will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

2.4.6 Estimates of Error: The estimated variances of the above estimates will be as follows:

2.4.6.1 For aggregate Yˆ :

$$\hat{Var}(\hat{Y}) = \sum_s \hat{Var}(\hat{Y}_s) = \sum_s \sum_t \hat{Var}(\hat{Y}_{st})$$

Rural

(a) Sub-strata of special stratum (i.e stratum = 99 and sub-stratum = 01):

$$\hat{Var}(\hat{Y}_{st}) = \hat{Var}_{srswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{N_{st}\hat{Y}_{sti}}{n_{sti}} - \hat{Y}_{st} \right)^2 \right]$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$

(b) Sub-strata of Group 1 villages (sub-stratum number: 01, 02, ... ,10):

$$\hat{Var}(\hat{Y}_{st}) = \hat{Var}_{ppswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{st}\hat{Y}_{sti}}{z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$

(c) Sub-strata of Group 2 villages (sub-stratum number: 11 onwards):

$$\hat{Var}(\hat{Y}_{st}) = \hat{Var}_{srswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{N_{st}\hat{Y}_{sti}}{n_{sti}} - \hat{Y}_{st} \right)^2 \right]$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$

Urban:

$$\hat{Var}(\hat{Y}_{st}) = \hat{Var}_{srswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{N_{st}\hat{Y}_{sti}}{n_{sti}} - \hat{Y}_{st} \right)^2 \right]$$

where $\hat{Y}_{sti} = \sum_j Y_{stij}$

2.4.6.2 For ratio Rˆ :

$$\hat{MSE}(\hat{R}) = \frac{1}{\hat{X}^2}\sum_{s}\left[\sum_{t} M_{st} + \sum_{t'} M_{st'}\right]$$

where t, t' indicate respectively the sub-strata with PPSWR and SRSWR selection at first stage.

Rural:

(a) Sub-strata of special stratum (i.e. stratum = 99 and sub-stratum = 01):

$$M_{st'} = \frac{1}{n_{st'}(n_{st'}-1)}\sum_{i=1}^{n_{st'}}\left[\frac{N_{st'}}{n_{st'i}}(\hat{Y}_{st'i} - \hat{R}\hat{X}_{st'i}) - (\hat{Y}_{st'} - \hat{R}\hat{X}_{st'})\right]^2$$

where

$$\hat{Y}_{st'i} = \sum_{j}\hat{Y}_{st'ij}\ , \quad \hat{X}_{st'i} = \sum_{j}\hat{X}_{st'ij}$$

(b) Sub-strata of Group 1 villages (sub-stratum number: 01, 02, ... ,10):

$$M_{st} = \frac{1}{n_{st}(n_{st}-1)}\sum_{i=1}^{n_{st}}\left[\frac{Z_{st}}{z_{sti}}(\hat{Y}_{sti} - \hat{R}\hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R}\hat{X}_{st})\right]^2$$

where

$$\hat{Y}_{sti} = \sum_{j}\hat{Y}_{stij}\ , \quad \hat{X}_{sti} = \sum_{j}\hat{X}_{stij}$$

(c) Sub-strata of Group 2 villages (sub-stratum number: 11 onwards):

$$M_{st'} = \frac{1}{n_{st'}(n_{st'}-1)}\sum_{i=1}^{n_{st'}}\left[\frac{N_{st'}}{n_{st'i}}(\hat{Y}_{st'i} - \hat{R}\hat{X}_{st'i}) - (\hat{Y}_{st'} - \hat{R}\hat{X}_{st'})\right]^2$$

where

$$\hat{Y}_{st'i} = \sum_{j}\hat{Y}_{st'ij}\ , \quad \hat{X}_{st'i} = \sum_{j}\hat{X}_{st'ij}$$

Urban:

$$M_{st'} = \frac{1}{n_{st'}(n_{st'}-1)} \sum_{i=1}^{n_{st'}} \left[\frac{N_{st'}}{n_{st'i}} (\hat{Y}_{st'i} - \hat{R}\hat{X}_{st'i}) - (\hat{Y}_{st'} - \hat{R}\hat{X}_{st'}) \right]^2$$

where

$$\hat{Y}_{st't} = \sum_j \hat{Y}_{st'ij} \quad , \quad \hat{X}_{st'i} = \sum_j \hat{X}_{st'ij}$$

2.4.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

2.5. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a schedule type are given below:

sch type	sector	formula for multipliers
1.2, 26	rural (sub-strata of special stratum i.e. stratum = 99)	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
	rural (Sub-stratum number: 01, 02,...., 10)	$\frac{Z_{st}}{n_{stj}} \times \frac{1}{z_{sti}} \times \frac{H_{stij}}{h_{stij}}$
	rural (sub-stratum number: 11 onwards)	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
	urban	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
	j = 1, 2 for Schedule 1.2 and j = 1, 2, 3, 4, 5, 6, 7 for Schedule 26	

Note:

(i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable may be used.

(ii) Multipliers have to be computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

2.6 Conceptual framework

2.6.1 House: Every structure, tent, shelter, etc. was a house irrespective of its use. It might be used for residential or non-residential purpose or both or even might be vacant.

2.6.2 Household and household size: A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb "normally" means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer's/host's household. "Living together" was given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person's family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household. The same principle was applicable for the residential staff of such establishments. However, if a group of persons among them pooled their income for spending, they were treated as forming a single household. A family living in a hotel was treated as a single household. The size of a household is the total number of persons in the household.

2.6.3 Age (years): The age in completed years, as on the date of survey, of the household members were recorded.

2.6.4 Person with Disability: "Person with disability" means a person with long term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders his full and effective participation in society equally with others.
"Barrier'' means any factor including communicational, cultural, economic, environmental, institutional, political, social, attitudinal or structural factors which hampers the full and effective participation of persons with disabilities in society.

2.6.5 Reference period for persons with disabilities: The Rights of Persons with Disabilities Act, 2016 (henceforth referred to as PWD Act, 2016), in the definition of persons with disability mentions 'long term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders his full and effective participation in society equally with others'.

For operational purpose in NSS 76th round as well as for proper interpretation of the results, 'long term' covered a period of 12 months or more. Thus, if the physical, mental, intellectual or sensory impairment existed for a period of 12 months or more or if such impairments are of recent origin but the nature of the impairments are such that these will last for a long term (12 months or more), the person was considered as a person with disability. Some specific conditions like amputation of leg/arm, victim of acid attack, diagnosis of haemophilia, multiple sclerosis, parkinson's disease, etc., even if were of recent origin was always considered as disabilities.

2.6.6 Classification of disabilities: For this survey, specified disabilities as stated in the PWD Act 2016 were considered. The detailed categories of the disabilities on which information was collected in this survey were as follows:

1) Locomotor disability	(i) acid attack victims,
	(ii) leprosy cured person,
	(iii) polio
	(iv) cerebral palsy
	(v) dwarfism
	(vi) muscular dystrophy
	(vii) other locomotor disability
(2) Visual disability	(viii) blindness
	(ix) low vision
(3) Hearing disability	(x) hearing disability
(4) Speech and language disability	xi) speech and language disability
(5) Mental retardation/ intellectual disability	(xii) specific learning disabilities
	(xiii) Autism Spectrum Disorder
	(xiv) other mental retardation/ intellectual disability
(6) Mental illness	(xv) mental illness
(7) Other disabilities	(a) chronic neurological conditions
	(xvi) parkinson's disease
	(xvii) multiple sclerosis
	(xviii) other chronic neurological conditions,
	(b) blood disorder
	(xix) thalassemia
	(xx) haemophilia
	(xxi) sickle cell disease
(8) Multiple Disabilities	(xxii) more than one of the above specified disabilities including deaf blindness

2.6.6.1 Locomotor disability: Locomotor disability implies a person's inability to execute distinctive activities associated with movement of self and objects. For the purpose of the Survey of Persons with Disabilities, the categories of locomotor disabilities were as follows:

(i) Leprosy cured person: A person who has been cured of leprosy but is suffering from (a) loss of sensation in hands or feet as well as loss of sensation and paresis in the eye and eye-lid but with no manifest deformity, (b) with manifest deformity and paresis but having sufficient mobility in the hands and feet to engage in normal activity, and (c) extreme physical deformity which prevents him/her from engaging in normal activity. A person was considered as a leprosy cured person if a medical practitioner had such an opinion.

(ii) Cerebral palsy: Cerebral palsy means a group of non-progressive neurological condition affecting body movements and muscle coordination, caused by damage to one or more specific areas of the brain, usually occurring before, during or shortly after birth. For the purpose of this survey a person was considered to have cerebral palsy if the person was diagnosed as suffering from cerebral palsy by a medical practitioner.

(iii) Polio: An infectious viral disease that mainly affects children under 5 years of age. It affects the nervous system and can cause paralysis. The affected person may develop deformities of the limbs and spine. For the purpose of this survey a person was considered to have polio if the person was diagnosed as suffering from polio by a medical practitioner.

(iv) Dwarfism: Dwarfism means a medical or genetic condition resulting in very short statured physique. A person of short statured with normal sized head but with disproportionate bone formation like having short limbs and long trunk or vice versa is considered to be dwarf. Besides, those who are understood or known to be dwarf was also be considered as dwarf.

(v) Muscular dystrophy: Muscular dystrophy means a group of hereditary genetic muscle disease that weakens the muscles that move the human body. It is characterised by progressive skeletal muscle weakness, defects in muscle proteins, and the death of muscle cells and tissue. For the purpose of this survey a person was considered to have muscular dystrophy if the person was diagnosed as suffering from muscular dystrophy by a medical practitioner.

(vi) Acid attack victim: Acid attack victim means a person disfigured due to violent assaults by throwing of acid or similar corrosive substance. If the informant reports that he/she was an acid attack victim, he/she was considered as an acid attack victim, irrespective of extent of disfigurement.

(vii) Other locomotor disability: Those who are not classified in any of the categories (i) to (vi) but having problems in movements of self or objects was considered as persons with other locomotor disability. Those having locomotor disability due to hunchback, leprosy not cured, etc., were also included here. Persons with hunch back are those with deformities in the body (other than limbs) whose back is humped in a convex position because of abnormal spinal curvature.

2.6.6.2 Visual disability: The persons with any of the following conditions were considered as persons with visual disability.

i. Cannot see at all;
ii. Has no perception of light even with the help of spectacles;
iii. Has perception of light but has blurred vision even after using spectacles, contact lenses etc. Such persons can however, move independently with the help of remaining sight;
iv. Can see light but cannot see properly to move about independently;
v. Has blurred vision but had no occasion to test if her/his eyesight would improve after taking corrective measures.

In case of (iii), (iv) and (v) above, to decide on whether the person has visual disability, it was confirmed whether the person can count the fingers of hand from a distance of 10 feet in good daylight.
It may be noted that one-eyed person not with any of the specific conditions mentioned above was not considered as a person with visual disability.

Those with visual disability were categorised as:

(viii) Blindness: These are the persons (i) with no light perception or (ii) has light perception but cannot count fingers even with spectacles upto a distance of 3 feet (both who normally uses spectacles or those who normally does not use spectacles).

(ix) Low vision: These are the persons who have light perception but cannot count fingers even with spectacles upto a distance of 3 to 10 feet (both who normally uses spectacles or normally does not use spectacles).

2.6.6.3 Speech and Language disability:

(x) Speech and Language disability: This refers to persons' inability to speak properly. A person with any one of the following conditions was considered as a person with speech and language disability:

i. Cannot speak at all or she/he is unable to speak normally on account of certain difficulties linked to speech disorder. Speech of a person is judged to be disordered if the person's speech is not understood by the listener;
ii. Able to speak in single words only and is not able to speak in sentences;
iii. It also includes those whose speech is not understood due to defects in speech, such as stammering, nasal voice, hoarse voice and discordant voice and articulation defects, etc.;
iv. Permanent disability arising out of conditions such as laryngectomy or aphasia was also considered as speech and language disability;
v. Aphasia is an inability to comprehend and formulate language because of damage to specific brain regions;
vi. Laryngectomy is the removal of the larynx and separation of the airway from the mouth, nose and esophagus. If a person has laryngectomy or a report of diagnosis with respect to aphasia, he was considered as having speech and language disability. Diagnosis means a medical diagnosis by a medical practitioner.

2.6.6.4 Hearing disability:

(xi) Hearing disability: A person with any one of the following conditions was considered as a person with hearing disability

i. Cannot hear at all;
ii. The persons' inability to hear properly;
iii. Has difficulty in hearing day-to-day conversational speech (hard of hearing).

If the person is using a hearing aid, the person was considered as having hearing disability. However, hearing problem in only one ear is not considered as having hearing disability.

2.6.6.5 Mental retardation/Intellectual disability:

This is a condition characterised by significant limitation both in intellectual functioning (reasoning, learning, problem solving) and in adaptive behaviour which covers a range of every day, social and practical skills. These are as follows:
(xii) "specific learning disabilities" means a heterogeneous group of conditions wherein there is a deficit in processing language, spoken or written, that may manifest itself as a difficulty to comprehend, speak, read, write, spell, or to do mathematical calculations and includes such

conditions as perceptual disabilities, dyslexia, dysgraphia, dyscalculia, dyspraxia and developmental aphasia. For the purpose of this survey a person was considered to have specific learning disabilities if the person was diagnosed as suffering from specific learning disabilities by a medical practitioner.

(xiii) "autism spectrum disorder" means a neuro-developmental condition typically appearing in the first three years of life that significantly affects a person's ability to communicate, understand relationships and relate to others, and is frequently associated with unusual or stereotypical rituals or behaviour. For the purpose of this survey a person was considered to have autism spectrum disorder if the person was diagnosed as suffering from autism spectrum disorder by a medical practitioner.

(xiv) 'other mental retardation/ intellectual disability': Those who are not classified in any of the categories (xii) and (xiii) above but having significant limitation both in intellectual functioning (reasoning, learning, problem solving) and in adaptive behaviour which covers a range of every day, social and practical skills was classified as persons with 'other mental retardation/ intellectual disability'

2.6.6.6 Mental Illness:

(xv) "Mental illness" means a substantial disorder of thinking, mood, perception, orientation or memory that grossly impairs judgment, behaviour, capacity to recognise reality or ability to meet the ordinary demands of life, but does not include retardation which is a condition of arrested or incomplete development of mind of a person, specially characterised by sub normality of intelligence.

2.6.6.7 Other type of disability:

Disability caused due to—

(a) chronic neurological conditions:

(xvi) "multiple sclerosis" means an inflammatory, nervous system disease in which the myelin sheaths around the axons of nerve cells of the brain and spinal cord are damaged, leading to demyelination and affecting the ability of nerve cells in the brain and spinal cord to communicate with each other. For the purpose of this survey a person was considered to have multiple sclerosis if the person was diagnosed as suffering from multiple sclerosis by a medical practitioner.

(xvii) "parkinson's disease" means a progressive disease of the nervous system marked by tremor, muscular rigidity, and slow, imprecise movement, chiefly affecting middle-aged and elderly people associated with degeneration of the basal ganglia of the brain and a deficiency of the neurotransmitter dopamine. For the purpose of this survey a person was considered to have parkinson's disease if the person was diagnosed as suffering from parkinson's disease by a medical practitioner.

(xviii) "other chronic neurological conditions": if a person is diagnosed with any chronic neurological conditions other than those specified in (a)(xvi) and (a)(xvii) above, and having disability due to such conditions was considered to have disability due to other chronic neurological conditions.

(b) Blood disorder—

(xix) "haemophilia" means an inheritable disease, usually affecting only male but transmitted by women to their male children, characterised by loss or impairment of the normal clotting ability of blood so that a minor wound may result in fatal bleeding. For the purpose of this survey a person was considered to have haemophilia if the person was diagnosed as suffering from haemophilia by a medical practitioner.

(xx) "thalassemia" means a group of inherited disorders characterised by reduced or absent amounts of haemoglobin. For the purpose of this survey a person was considered to have thalassemia if the person was diagnosed as suffering from thalassemia by a medical practitioner.
(xxi) "sickle cell disease" means a hemolytic disorder characterised by chronic anemia, painful events, and various complications due to associated tissue and organ damage; "hemolytic" refers to the destruction of the cell membrane of red blood cells resulting in the release of hemoglobin. For the purpose of this survey a person was considered to have sickle cell disease if the person has been diagnosed as suffering from sickle cell disease by a medical practitioner.

2.6.6.8 Multiple disabilities

(xxii) Persons with more than one of the above specified disabilities including deaf blindness which means a condition in which a person may have combination of hearing and visual disability causing severe communication, developmental, and educational problems.

2.6.7 Broad type of disabilities: The broad types of disabilities are as follows:

- locomotor disability
- visual disability (blindness/low vision)
- hearing disability
- speech and language disability
- mental retardation/ intellectual disability
- mental illness
- other type of disability

2.6.8 Person with different types of disabilities: Persons with only locomotor disability are those who have only locomotor disability and with no other disability. However, persons with locomotor disability are those who have locomotor disability with or without any other type of disability. Similar, for each of the broad types of disabilities.

2.6.9 Person with multiple disability: Persons with more than one category of disability (i) to (xxi) as given in Para 2.5 are classified as persons with multiple disability.

2.6.10 Operational guidelines for identifying disabilities: The following guidelines were adopted for identifying disabilities.

2.10.1 Some guidelines for identification of persons with locomotor disability:

- Loss or absence or inactivity of whole or part of hand or leg or both due to amputation, paralysis, deformity or dysfunction of joints which affects his/her “normal ability to move self or objects”;
- Able to move only with the help of walking aids;
- Have acute and permanent problems of joints/muscles that have resulted in limited movement;

- Not able to move or pick up any small thing placed nearby;
- Have stiffness or tightness in movement;
- Have difficulty in balancing and coordinating body movements;
- Have loss of sensation in the body due to paralysis or leprosy or any other reason;
- Have any deformity of the body part(s) like having a hunch back;
- Persons who are very short statured (dwarf);
- Persons with stiff neck of permanent nature who generally do not have difficulty in the normal movement of body and limbs;
- Special care to be taken not to omit persons with cerebral palsy, muscular dystrophy and acid attack victims.

2.10.2 Some guidelines for identification of persons with visual disability:

- Cannot see at all;
- Has no perception of light even with the help of spectacles;
- Has perception of light but has blurred vision even after using spectacles, contact lenses etc. Such persons can however, move independently with the help of remaining sight;
- Can see light but cannot see properly to move about independently;
- Has blurred vision but had no occasion to test if her/his eyesight would improve after taking corrective measures;
- For those who have perception of light/ blurred vision, to decide on whether the person has visual disability, it may be confirmed whether the person can count the fingers of hand from a distance of 10 feet in good daylight;
- It may be noted that one-eyed person not with any of the specific conditions mentioned above was not considered as a person with visual disability.

2.10.3 Some guidelines for identification of persons with Speech and Language disability:

- This refers to persons' inability to speak properly;
- Cannot speak at all or he/she is unable to speak normally on account of certain difficulties linked to speech disorder. Speech of a person is judged to be disordered if the person's speech is not understood by the listener;
- Able to speak in single words only and is not able to speak in sentences;
- It also includes those whose speech is not understood due to defects in speech, such as stammering, nasal voice, hoarse voice and discordant voice and articulation defects, etc.;
- Disability arising out of conditions such as laryngectomy or aphasia.

2.10.4 Some guidelines for identification of persons with hearing disability:

- The persons inability to hear properly;
- Cannot hear at all;
- Has difficulty in hearing day-to-day conversational speech (hard of hearing);
- If the person is using a hearing aid, the person was considered as having hearing disability. However, hearing problem in only one ear was not considered as having hearing disability. Thus if the person has hearing problem in only one ear and is using a hearing aid, the person was not considered as having hearing disability.

2.10.5 Some characteristics of mental retardation/ intellectual disabilities for identification purpose:

- Lacks understanding/comprehension as compared to her/his own age group;

- Is unable to communicate her/his needs when compared to other persons of her/his age group;
- Has difficulty in doing daily activities;
- Has difficulty in understanding routine instructions;
- Has extreme difficulty in making decisions, remembering things or solving problems.

2.10.6 Some characteristics for identification of person with mental illness.

- Exhibits unnecessary and excessive worry and anxiety;
- Exhibits repetitive (obsessive-compulsive) behavior/ thoughts;
- Exhibits sustained changes of mood or mood swings (joy and sadness);
- Has unusual experiences - such as hearing voices, seeing visions, experience of strange
- smells or sensations or strange taste;
- Exhibits unusual behaviors like talking/laughing to self, staring in space;
- Has difficulty in social interactions and adaptability;
- Is taking medicines or other treatment for mental illness.

2.6.11 Identification of some specific categories of disabilities: For the purpose of NSS 76th round, person with disability means a person with long term physical, mental, intellectual or sensory impairment which, in interaction with barriers, hinders his full and effective participation in society equally with others). To identify whether a person has disability, diagnosis by a medical practitioner was not necessary. However, to classify the disability of a person in the following specified categories, report of medical diagnosis was necessary: (i) cerebral palsy, (ii) muscular dystrophy, (iii) specific learning disabilities, (iv) autism spectrum disorder, (v) multiple sclerosis, (vi) parkinson's disease, (vii) other chronic neurological conditions, (viii) haemophilia, (ix) thalassemia, (x) sickle cell disease, (xi) polio.

2.6.12 Household's usual monthly consumer expenditure: This information was collected to classify the households into different UMPCE (Usual Monthly Per Capita Consumption Expenditure) classes. Household's usual monthly consumer expenditure is the sum total of monetary values of all goods and services consumed by the household on domestic account with a monthly regularity. Unusual expenditures, such as expenditure on social ceremonies, capitation fee, hospitalisation etc., were excluded for deriving usual monthly consumer expenditure of the household. However, expenditure on household durable goods was included and monthly expenditure on durable goods was derived by apportioning the total expenditure made by the household on durable goods during last 365 days.

For deriving Household's usual monthly consumer expenditure, information on regular monthly expenditure of the household for household purposes out of purchase, home grown and wages in kind, free collection, gift etc., was collected along with information on expenditure of the household for purchase of durable goods during last 365 days. For this purpose, information was collected separately on the following items:

(i) usual consumer expenditure in a month for household purposes out of purchase (A)
(ii) imputed value of usual consumption in a month from home grown stock (B)
(iii) imputed value of usual consumption in a month from wages in kind, free collection, gifts etc.(C)
(iv) expenditure on purchase of household durables during last 365 days (D)

On the basis of the values of A, B, C, D, household's usual monthly consumer expenditure was derived using the following formula:

household's usual monthly consumer expenditure = A + B + C + (D/12)

2.6.13 Quintile classes of UMPCE: The population of any region or domain can be divided into five quintile classes of UMPCE, where the 1st quintile of the distribution of UMPCE means the level of UMPCE below which 20 per cent of the population lie, the second quintile, the level below which 40 per cent of the population lie, and so on. Quintiles are estimated separately for the distribution of UMPCE in the rural and urban sector of each State.

2.6.14 Whether parents are/were blood-related: It was ascertained whether the parents of the household member are/were blood-related or not. Some examples of the relationship between the parents of the household members that were considered as blood relationship are:

- uncle-niece
- nephew-aunt
- cousins

When the relation between parents of a household member is 'cousin', only first and second cousins were considered.

Information on whether the parents are/were blood-related collected as follows:

yes
no
not known

2.6.15 Cause of disability: Cause of disability was recorded in respect of (i) locomotor disability, (ii) visual disability, (iii) hearing disability and (iv) speech and language disability. For these types of disabilities, cause of disability was recorded. The descriptions of the codes corresponding to cause of disability were as follows:

(i) disease
(ii) other than disease due to burn
(iii)other than disease due to injury other than burn
(iv)others

2.6.16 Disability area: Information on the parts of the body in which disability occurred was collected for locomotor disability as follows:

(i) both the hands
(ii) one of the hands
(iii)both the legs
(iv)one of the legs
(v) hands and legs
(vi)other body parts

2.6.17 Whether having disability from birth: Information on whether having the disability from birth was recorded for all persons with disabilities.

2.6.18 Age at onset of disability: The age (in competed years) at the onset of disability was recorded for all the persons with disabilities when the disability was not from birth.

2.6.19 Prevalence of disability: For the purpose of this report prevalence of disability is defined as percentage of persons with disability in the population.

2.6.20 Incidence of disability: For the purpose of this report, incidence of disability in population, is, the number of persons whose onset of disability (by birth or otherwise) had been during the specified period of 365 days preceding the date of survey per 1,00,000 persons. This included those persons who did not have disability 'since birth' but disability commenced during last 365 days preceding the date of survey as well as persons whose onset of disability was since birth and age of the person was less than 1 year.

2.6.21 Place of occurrence of disability: For the persons with disabilities who were not having disability since birth and for whom cause of disability was burn or injury other than burn information on the place occurrence of the disability was collected. These were

(i) at workplace
(ii) on road
(iii)at home
(iv)at other places

Information on place of occurrence of disability was collected for the persons with the following disabilities: locomotor disability, visual disability, hearing disability and speech and language disability.

2.6.22 Treatment taken/undergoing treatment: For the persons with disabilities information on 'treatment taken/undergoing treatment' in respect of the disability was collected. The description of the codes for collection of information on treatment taken/undergoing treatment were as follows:

whether treatment taken / undergoing treatment
- yes treatment taken:
  - consulting doctor
  - otherwise
- yes undergoing treatment:
  - consulting doctor
  - otherwise
- attending special school/special therapy
- no:
  - cannot afford
  - not available
  - not required
- not known

Attending special school/special therapy meant that a household member was attending special school or took special therapy (such as speech therapy, behavioural therapy, etc.) relating to the disability.

2.6.23 Aid/appliances: These are the assistive devices that can promote physical, social and psychological independence of the persons with disabilities by reducing the effect of disabilities. For the purpose of this survey only those assistive devices which were in the nature of external appliances were considered as aid/ appliance. Information on type of aid / appliance, how aid / appliances acquired and whether aid / appliance regularly used was recorded in respect of the persons with the following disabilities: locomotor disability, visual disability, hearing disability

(i) Type of aid/appliance for locomotor disability: For locomoter disability, types of aid/appliances on which information was collected were as follows:

(i) electric wheelchair
(ii) manual wheelchair
(iii)artificial limb
(iv)crutch
(v) splint
(vi)tricycle
(vii)callipers
(viii)spinal brace
(ix)others

(ii) Type of aid/appliance for visual disability: For visual disability, types of aid/appliances on which information was collected were as follows:

(i) high powered glasses
(ii) contact lens
(iii)smart cane
(iv)regular cane (like, white cane)
(v) other cane
(vi)others

(iii) Type of aid/appliance for hearing disability: For hearing disability, types of aid/appliances on which information was collected were as follows:

(i) hearing aid
(ii) others

2.6.24 Extent of personal assistance required in doing daily activities: For persons with disabilities extent of personal assistance required in doing daily activities by the household member with disability was recorded. These were:

always
sometimes
not required

Information on extent of personal assistance required in doing daily activities was collected for the following disabilities: locomotor disability, visual disability, mental retardation/intellectual disability, mental illness and other type of disability). For those who were in the greatest need for personal assistance/help or who were unable to do activities due to disability without personal assistance, for them extent of personal assistance required was considered as 'always'. For those who had difficulty in doing daily activities due to disability and sometimes needed personal assistance, for them extent of personal assistance required was considered as 'sometimes'. For those who have difficulty in doing daily activities due to disability but needed no personal assistance or those who have no difficulty in doing daily activities, for them extent of personal assistance required was considered as 'not required'.

2.6.25 Extent of speech and language disability: For each household member with speech and language disability, extent of speech and language disability was recorded. These were:

(i) cannot speak
(ii) can speak only single words or speaks unintelligibly
(iii) have speech and language difficulty other than those in (i) and (ii)

2.6.26 Extent of hearing disability: For each of the household member with hearing disability, extent of disability was recorded as follows

(i) cannot hear or can only hear loud sounds
(ii) can hear only shouted words
(iii) have hearing difficulty other than those covered in (i) and (ii) above.

If the person with hearing disability cannot hear at all or can only hear loud sounds, such as, thunder, for them extent of hearing disability was 'cannot hear or can only hear loud sounds'. If the person with hearing disability can hear only shouted words or could hear only if the speaker was sitting in the front, for such persons extent of hearing disability was 'can hear only shouted words'. If the person has hearing disability other than those mentioned in (i) and (ii) such persons were classified in category (iii). They usually ask to repeat the words spoken by the speaker or would like to see the face of the speaker while he/she spoke or would feel difficulty in conducting conversations due to hearing disability.

2.6.27 Living arrangement: Living arrangement meant arrangement that existed for the household member regarding where and with whom they lived. This was decided considering the following:

- composition of the household in which the person with disability is a member,
- age of the household member.
- marital status of the household member.

Living arrangement was recorded for each person with disability. These were:
living with spouse and other household members
living with spouse only
living without spouse but with :
    parents
    children
    other relatives
    non-relatives
living alone
    not as an inmate of institution/ hostel
    as an inmate of institution/ hostel

2.6.28 Arrangement of regular care giver: For the purpose of the survey, a 'care-giver' meant any person who with or without payment provided care, support or assistance to a person with disability. They included the household members also. These were:

care giver is available
    hired care giver
    institution/ organisation
    mother
    father
    spouse
    brother
    sister
    son
    daughter
    son-in-law
    daughter-in-law

grandson
granddaughter
others
care giver is required but not available
no care giver is required

2.6.29 Receipt of any aid/ help: The receipt of aid/help by the persons with disabilities was ascertained and information was recorded in for each of the persons with disabilities. These were:

received aid/help:
from government for:
education/training
aid/appliance
corrective surgery
treatment other than surgery
employment
disability pension
in the form of loan
other social security
other government aid/help

any aid / help from organisation other than government

did not receive any aid/help

2.6.30 Use of public transport: Public transport is a shared passenger-transport service which is available for use by the general public, as distinct from modes such as taxicab, carpooling or hired buses. Public transport includes buses, trams, trains, metro trains and ferries. For a person with disability it was ascertained whether he/she used public transport during a period of last 365 days preceding the date of survey. For those who used public transport, difficulty faced in accessing/ using public transport was recorded. These were:

difficulty faced:
due to steps/stairs and non-availability of ramp, grooved tiles or lift
in opening doors
no seating arrangement:
in the public transport
at the bus stops, stations, etc.
no special toilet seats
no sign for direction/instruction/no public announcement system
others
no difficulty faced

2.6.31 Accessing public building (including educational institution, workplace, etc): A building that is used by the public for purposes such as assembly, education, entertainment, workplace, office, worship, etc., was considered as public building. For a person with disability it was ascertained whether he/she accessed public building during a period of last 365 days preceding the date of survey. For those who used accesses public building, difficulty faced in accesses public building was recorded. These were:

difficulty faced:

due to steps/stairs and non-availability of ramp, grooved tiles or lift
in opening doors
no seating arrangement:
in the waiting area
at the point of receiving service
no special toilet seats
no sign for direction/instruction/no public announcement system.....
others
no difficulty faced

2.6.32 Certificate of disability and percentage of disability as per disability: For each of the household members with disability it was enquired whether he/she has a certificate of disability. Only the certificate of disability issued by any government authorities (e.g., central/state/local bodies) was considered. For those with certificate of disability information was recorded regarding percentage of disability as per certificate. These were:

percentage of disability as per certificate:
40% or more but less than 60%
60% or more but less than 80%
80% or more
none of these

2.6.33 Out of pocket expenses relating to disability

2.33.1 In this survey only out-of-pocket expenditure relating to disability incurred by the household was recorded. Out-of-pocket expenditures were those that were made directly by households excluding reimbursements. If expenditure incurred by the household was later reimbursed, it was not recorded. If of the total out-of-pocket expenditure only a part was reimbursed, only that part of the out-of-pocket expenditure which was not reimbursed was considered.

Out-of-pocket expenses relating to disability was collected separately for each of the following categories:

(i) infrequent medical expenditure during last 365 days (e.g., surgery, equipment, hospitalisation, etc.): This expenditure covered medical expenditure during last 365 days relating to disability which were of infrequent nature, i.e., if those were not usually incurred with monthly regularity.

(ii) infrequent non-medical expenditure during last 365 days (e.g., transport, lodging, food, etc.): This expenditure covered non-medical expenditure during last 365 days relating to disability which were of infrequent nature i.e., if those were not usually incurred with monthly regularity.

(iii) usual monthly medical expenditure (e.g., medicine, caregiver, etc.): This expenditure covered those medical expenditures which were usually incurred with monthly regularity.

(iv) usual monthly non-medical expenditure (e.g., transport, lodging, food, etc.): This expenditure covered those non- medical expenditures which were usually incurred with monthly regularity.

Coverage of medical and non-medical expenditures were as follows

(i) Coverage of medical expenditure: Medical expenditure included doctor's/surgeon's fee, medicines, diagnostic tests, bed charges, attendant charges, physiotherapy, speech therapy, purchase/replacement/ repair of equipment/appliances, caregiver, etc.

(ii) Coverage of non-medical expenditure: Non-medical expenditure included transport (for person with disability by ambulance or other vehicle, including those accompanying the person with disability, if any), registration fee, food, lodging charges, other incidental charges incurred for treatment.

2.33.2 Average monthly out-of-pocket expenses per person due to disability={(infrequent medical expenditure during last 365 days + infrequent non-medical expenditure during last 365 days)/12]+(usual monthly medical expenditure + usual monthly non-medical expenditure)}/(total number of persons with disability reporting out-of-pocket expenditure on disability)

2.6.34 Social group: For each household surveyed, the social group to which the head of the household belonged to was recorded. The social group of the head of the household was considered as the social group of all the members of the household irrespective of the actual social group to which the individual members belonged. In the survey, information was collected in respect of four social groups viz. scheduled tribe (ST), scheduled caste (SC), other backward class (OBC) and the rest referred to as others. The information recorded in this regard was based entirely on the response of the informant and not based on any state or central level list of the social group.

2.6.35 Religious group: For each household surveyed, the reported religion of the head of the household was considered as the religion of all the members of the household irrespective of the actual religion followed by individual members. Seven religions viz. Hinduism, Islam, Christianity, Sikhism, Jainism, Buddhism and Zoroastrianism were explicitly considered for data collection as a part of the household characteristics. The information recorded in this regard was based entirely on the response of the informant.

2.6.36 Economic activity: The entire spectrum of human activity falls into two categories: economic activity and non-economic activity. Any activity that results in production of goods and services that adds value to national product is considered as an economic activity. The economic activities have two parts - market activities and non-market activities. Market activities are those that involve remuneration to those who perform it, i.e., activity performed for pay or profit. Such activities include production of all goods and services for market including those of government services, etc. Non-market activities are those involving the production of primary commodities for own consumption and own account production of fixed assets.

2.36.1 The full spectrum of economic activities as defined in the UN System of National Accounts (SNA 2008) is not covered in the definition adopted for collection of information on employment and unemployment of the household members. Production of any good for own consumption is considered as economic activity by UN System of National Accounts but production of only primary goods for own consumption is considered as economic activity by NSO. While the former includes activities like own account processing of primary products among other things, in the NSS surveys, processing of primary products for own consumption is not considered as economic activity. However, it may be noted that 'production of agricultural goods for own consumption' covering all activities up to and including stages of threshing and storing of produce for own consumption, comes under the coverage of the economic activities of NSO.

2.36.2 The term ‘economic activity’ included:
(i) all the market activities, i.e., the activities performed for pay or profit which result in production of goods and services for exchange,

(ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e., industry Divisions 01 to 09 of NIC-2008) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods, including threshing and storing of grains for own consumption. and
(b) the activities relating to the own-account production of fixed assets. Own account production of fixed assets includes construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labourer or a supervisor.

2.36.3 The activities like prostitution, begging, etc., which may result in earning, were not considered as economic activities for the survey.

2.6.37 Activity status: It is the activity situation relating to participation in economic and / or non-economic activities in which a person is found engaged during a reference period. According to this, a person is in one or a combination of the following three broad activity statuses during a reference period:

(i) Working or being engaged in economic activity (work),

(ii) Being not engaged in economic activity (work) and either making tangible efforts to seek 'work' or being available for 'work' if the 'work' is available and

(iii) Being not engaged in any economic activity (work) and also not available for 'work'.

Activity statuses, as mentioned in (i) & (ii) above, are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, activity status (i) above is associated with 'employment' and activity status (ii) with ‘unemployment’. During a specified reference period by adopting the procedure to determine the broad activity statuses, each person is classified in one of the three broad activity statuses. Persons found with the broad activity statuses (i), (ii) and (iii), during the reference period, are employed (worker), unemployed and ‘not in labour force’, respectively.

2.37.1 The detailed activity statuses under each of the three broad activity statuses (viz. ‘employed’, ‘unemployed’ and ‘not in labour force’) and the corresponding codes used in the survey are given below:

code description

working (or employed)

self-employed

11 worked in household enterprises (self-employed) as own-account worker
12 worked in household enterprises (self-employed) as an employer

21 worked in household enterprises (self-employed) as helper

regular wage/ salaried employee
31 worked as regular wage/salaried employee

casual labour
41 worked as casual labour in public works
51 worked as casual labour in other types of works

not working but seeking/available for work (or unemployed)
81 sought work or did not seek but was available for work

neither working nor available for work (or not in labour force)
91 attended educational institutions
92 attended to domestic duties only
93 attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use
94 rentiers, pensioners, remittance recipients, etc.
95 not able to work owing to disability
97 others (including beggars, prostitutes, etc.)
99 children of age 0-4 years

2.6.38 Constituents of 'employed, 'unemployed', 'labour force', 'out of labour force'

The various constituents of 'employed, 'unemployed', 'labour force', 'out of labour force' are as explained below:

2.38.1 Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained themselves from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid household members who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers.

2.38.2 Seeking or available for work (or unemployed): Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those 'seeking or available for work' (or unemployed).

2.38.3 Labour force: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force.

2.38.4 Not in labour force: Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labours not working due to sickness.

2.38.5 Self-employed: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have autonomy (decide how, where and when to produce) and economic independence (in respect of choice of market, scale of operation and finance) for carrying out their operation. The remuneration of the self-employed consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise.

Self-employed persons were categorised as follows:
(i) own-account workers: Self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour were considered as own-account workers. They could, however, have had unpaid helpers to assist them in the activity of the enterprise.

(ii) employers: Self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour were considered as employers.

(iii) helpers in household enterprise: Self-employed persons who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed were considered as helpers in household enterprise. They did not run the household enterprise on their own but assisted the concerned person living in the same household in running the household enterprise.

2.38.6 Regular wage/ salaried employee: These were persons who worked in others' farm or nonfarm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.38.7 Casual labour: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was considered as a casual labour.

2.6.39 Approach followed to determine activity status: The persons with disabilities were classified into various activity categories on the basis of activities (economic/non-economic) pursued by them in the usual status approach on the basis of the reference period of one year.

2.39.1 Usual activity status: The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively long time (major time criterion) during the 365 days preceding the date of survey is considered the usual principal activity status of the person. To decide the usual principal activity of a person, he/ she is first categorised as belonging to the labour force or not, during the reference period on the basis of major time criterion. Persons, thus adjudged as not belonging to the labour force are assigned the broad activity status 'neither working nor available for work'. For the persons belonging to the labour force, the broad activity status of either 'working' or 'not working but seeking and/ or available for work' is then ascertained again on the basis of the relatively long time spent in the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status category of a person pursuing more than one such activity was determined again on the basis of the 'relatively long time spent' criterion.

2.39.2 Subsidiary economic activity status: Usual principal status of a person is determined as the status on which the person spent relatively long time (major time criterion) during the 365 days preceding the date of survey. Such persons may have also pursued, in addition to his/her usual principal status, some economic activity for 30 days or more during the reference period of 365 days preceding the date of survey. The status in which such economic activity is pursued during the reference period of 365 days preceding the date of survey is the subsidiary economic activity status of the person. In case of multiple subsidiary economic activities, the major activity and status based on the 'relatively long time spent' criterion was considered. Engagement in work in subsidiary capacity may arise out of the two following situations:

(i) a person may be engaged for a relatively long period during the 365 days in an economic (a non-economic activity) and for a relatively small period, which is not less than 30 days, in another economic activity (any economic activity).

(ii) a person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for relatively small period in a subsidiary capacity. In such cases, since both the activities are being pursued throughout the year and the duration of both the activities is more than 30 days, the activity which is being pursued for a relatively small period was considered as his/ her subsidiary activity.

2.6.40 Industry of the economic activity: For the persons with disabilities who were engaged in economic activity in the usual status approach, information on industry of the economic activity was recorded. The sector of the economic activity in which a person was found engaged was his/her industry of work. For collection of information on industry, National Industrial Classification-2008 (NIC-2008) was used. Division 98 of NIC-2008 was not used for the purpose of collection of information on industry of activity. Division 98 of NIC-2008 is for undifferentiated goods and services producing activities of private households for own use. As a part of the activities shown under Division 98 (viz. hunting and gathering, farming and the production of shelter) was considered as economic activities in this survey, the industry of these undifferentiated activities was judged by considering the industry in which major time was spent. Thus, this part of activities got classified against the respective industries under Sections A or B relating to the primary sector or section F relating to construction and not in Division 98. The rest of Division 98 was not considered as economic activity in this survey.

2.6.41 Public works: 'Public works' were those activities which were sponsored by Government or Local Bodies, and which cover local area development works like construction of roads, dams, bunds, digging of ponds, etc., as relief measures, or as an outcome of employment generation schemes under the poverty alleviation programmes such as Mahatma Gandhi National Rural Employment Guarantee (MGNREG) works, Sampoorna Grameen Rozgar Yojana (SGRY), National Food for Work Programme (NFFWP), etc. The coverage of schemes under 'public works' is restricted to those schemes under poverty alleviation programmes, or relief measures through which the Government generated wage employment. The types of works that were generally undertaken through these schemes, were watershed development, drought proofing, land levelling, flood control, laying pipes or cables, sanitation, water harvesting, digging of irrigation canal, development of orchard, road construction, building construction / repair, running crèche, etc. There may be some schemes sponsored by the Government and in operation, which were conceived as self-employment generation schemes. Some such schemes of the Government were Swarnjayanti Gram Swarozgar Yojana (schemes under erstwhile IRDP merged with this), Rural Employment Generation Programme (REGP), Prime Minister's Rozgar Yojana (PMRY), Valmiki Ambedkar Awas Yojana

(VAMBAY), etc. Employment generated through these schemes was not considered within the purview of 'public works'. Classification of individuals as 'casual labour in public works' required that the work in which they participated was 'public works' as defined above. To distinguish between 'public works' and works not classifiable as 'public works', some broad characteristics of 'public works' were identified, viz. the primary objective was generation of wage employment and poverty alleviation, and creation of community asset as an outcome in achieving those main objectives.

2.6.42 Enterprise: An enterprise is an undertaking which is engaged in the production and/ or distribution of some goods and/ or services meant primarily for the purpose of sale, whether fully or partly. An enterprise may be owned and operated by a single household, or by several households jointly, or by an institutional body.

2.6.43 Household Enterprise: A household enterprise is one which is run by one or more members of a household or run jointly by two or more households on partnership basis irrespective of whether the enterprise is located in the premises of the household(s) or not. In other words, all proprietary and partnership enterprises are household enterprises.

2.6.44 Definitions of various types of enterprises:

(i) Proprietary: When an individual is the sole owner of an enterprise it is a proprietary enterprise. Own account production of fixed assets for own use, when produced by a single member, was classified as proprietary enterprise.

(ii) Partnership: Partnership is defined as the 'relation between persons who have agreed to share the profits of a business carried on by all or any one of them acting for all'. There may be two or more owners, belonging to the same or different households, on a partnership basis, with or without formal registration (where there is a tacit understanding about the distribution of profit among the so-called partners). Own account production of fixed assets, when produced by two or more members belonging to the same or different households was classified as partnership enterprises. Thus, own account production of fixed assets by a group of households for community use was classified as partnership enterprise.

(iii) Government/Local Body: Government/local body includes Government administrative departments of both the Central and State Governments, local bodies of rural and urban areas and Departmental Enterprises like Indian Railways, Department of Post, etc.

(iv) Autonomous Bodies: Autonomous Bodies are mostly set up by an Act of Parliament/Assembly or registered under Societies Registration Act. However, they are separate from Government Administrative Departments as they enjoy certain degree of autonomy in their day to day functioning. They receive grants from Government in addition to their own resources. Further, these are engaged in non-market production. Some of the autonomous bodies are: All India Institute of Medical Sciences, Indian Institute of Technology, Indian Statistical Institute, Housing Boards, Development Boards, Pollution Control Boards etc.

(v) Public Limited Company: A public limited company is defined as a company that is not a private company. As such public companies can have an unlimited number of members and can invite the public to subscribe to its shares and debentures. The minimum number of members required to form a public limited company is seven.

(vi) Private Limited Company: Private limited company means a company which by its articles:

(a) restricts the right to transfer its shares, if any,
(b) limits the number of its members to two hundred not including-
(i) persons who are in the employment of the company, and
(ii) persons who, having been formerly in the employment of the company, were members of the company while in that employment and have continued to be members after the employment ceased; and
(c) prohibits any invitation to the public to subscribe for any share in, or debentures of, the company.

[Where two or more persons hold jointly one or more shares in a company, they shall, for the purpose of this definition, be treated as a single member.]

(vii) Co-operative Societies: Co-operative society is one that is formed through the co-operation of a number of persons, recognised as members of the society, to benefit themselves. In the process, the funds are raised by members' contributions/investments and the profits generated out of the society's activities are shared by the members. The government itself in a government agency can also be a member or shareholder of a registered co-operative society but this fact cannot render the society into a public sector enterprise for the purpose of this survey.

(viii) Trust: An arrangement through which one set of people, the trustees, are the legal owners of property which is administered in the interest of another set, the beneficiaries. Trusts may be set up to provide support for individuals or families, to provide pensions, to run charities, to liquidate the property of the bankrupts for the benefit of their creditors, or for the safe keeping of securities bought by trusts with their investor's money. The assets, which trusts hold are regulated by law, must be administered in the interests of the beneficiaries, and not for the profit of the trustees.

(ix) Non-Profit Institutions (NPI): NPIs are legal or social entities created for the purpose of producing goods and services whose status does not permit them to be a source of income, profit or other financial gain for the units that establish, control or finance them. In practice, their productive activities are bound to generate either surpluses or deficits but any surpluses they happen to make cannot be appropriated by other institutional units. The articles of association by which they are established are drawn up in such a way that the institutional units which control or manage them are not entitled to a share in any profits or other income which they receive.

(x) Employer Households (i.e. private households employing maid servant, watchman, cook, etc.): The households which are employing maid servant, watchmen, cook, private tutor, etc. was considered notionally as enterprise for the purpose of this survey and was classified as 'Employer households'.

2.6.45 Informal sector: Proprietary and Partnership enterprises have been classified as informal sector for the purpose of this Report.

2.6.46 Social security benefits: It was ascertained from the regular salaried/wage employees in usual status with disabilities whether they were covered under any of the specified social security benefits or a combination of them which were arranged or for which contribution was made by the employer. Availability of social security benefits were as follows,

eligible for:
only PF/ pension (i.e., GPF, CPF, PPF, pension, etc.)
only gratuity
only health care & maternity benefits

only PF/ pension and gratuity
only PF/ pension and health care & maternity benefits
only gratuity and health care & maternity benefits
PF/ pension, gratuity, health care & maternity benefits
not eligible for any of above social security benefits
not known

The term Provident Fund (PF) includes General Provident Fund, Contributory Provident Fund, Public Provident Fund, Employees Provident Fund, etc. Coverage under any of these social security schemes means that the employer contributes/ arranges/ pays in implementing the social security benefits for the worker. If an employee operates, in his/ her individual capacity, a PPF account and the employer is not contributing in that account then it was not considered a social security benefit. On the contrary, a scheme, in which both the employee and the employer contribute, was considered a social security benefit. When benefits are given by the employer for treatment of illness/ injury or an employee is eligible for paid leave for a specified period of prenatal/ childbirth/ post-natal stage or the expenditure for maternity care or childbirth is borne by the employer as per the conditions of employment, then such benefits were considered as health care & maternity benefits. There may be cases where the employer is not directly contributing in a social security scheme for the employees, but being the member of the welfare association or organization or scheme in relation to the specific activity carried out by the employer, the employees get the benefit from that welfare association/ organization/ scheme. Such cases was also considered as social security benefits availed through the employer.

2.6.47 Key Indicators of Employment and Unemployment: For the persons with disabilities employment and unemployment indicators viz. LFPR, WPR and UR are derived. The definitions of these indicators are as follows:

1. Labour force participation rate (LFPR): LFPR is defined as the percentage of persons in the labour force in the population.

$$\text{LFPR} = \frac{\text{no of employed persons} + \text{no of unemployed persons}}{\text{total population}} * 100$$

2. Worker Population Ratio (WPR): WPR defined as the percentage of employed persons in the population.

$$\text{WPR} = \frac{\text{no of employed persons}}{\text{total population}} * 100$$

3. Unemployment Rate (UR): UR is defined as the percentage of persons unemployed among the persons in the labour force.

$$\text{UR} = \frac{\text{no of unemployed persons}}{\text{no of employed persons} + \text{no of unemployed persons}} * 100$$

2.6.48 Highest level of education: It is the highest level of education considering all general/ technical/vocational educational level successfully completed by the members of the household. A person who can both read and write a simple message with understanding in at least one language

was considered literate. Those who were not able to do so, were considered not literate. For the purpose of this survey, the primary level was defined as Class I-V for all the States/UTs uniformly. In this survey, information on general educational level was collected on the following 15 categories (i to xv):

educational level

(i) not literate
(ii) literate without any schooling

literate without formal schooling:
(iii) through NFEC
(iv) through TLC/AEC
(v) others

literate with formal schooling:
(vi) below primary
(vii) primary
(viii) upper primary/ middle
(ix) secondary
(x) higher secondary
(xi) diploma /certificate course (upto secondary)
(xii) diploma /certificate course (higher secondary)
(xiii) diploma /certificate course (graduation and above)
(xiv) graduate
(xv) post graduate and above

2.6.49 Highest level of technical education: As per the All India Council for Technical Education Act, 1987, technical education means programmes of education, research and training in fields of Engineering and Technology, Architecture, Town Planning, Management, Pharmacy and Applied Arts & Crafts. In this survey, technical education level covered the following 16 categories (i to xvi):

(i) no technical education

technical degree in:
(ii) agriculture
(iii) engineering/technology
(iv) medicine
(v) crafts
(vi) other subjects

diploma or certificate (below graduate level) in:
(vii) agriculture
(viii) engineering/technology
(ix) medicine
(x) crafts
(xi) other subjects

diploma or certificate (graduate and above level) in:
(xii) agriculture
(xiii) engineering/technology

(xiv) medicine
(xv) crafts
(xvi) other subjects

2.6.50 Vocational/ Technical Training: Information on vocational/technical training was collected for persons of age 12-59 years with disability.
A vocational/ technical training may broadly be defined as training through which knowledge and skills for the world of work is acquired. The main objective of vocational/ technical education and training is to make individuals employable for a broad range of occupations in various industries and other economic sectors. There are three methods of acquiring Vocational/ Technical training, namely, (i) Formal Training, (ii) Non-formal Training and (iii) Informal Training.

2.50.1 Formal Training: It is the training that is acquired through institutions/ organisations and is recognised by national certifying bodies, leading to diplomas/ certificates and qualifications. Formal training is structured according to educational arrangements such as curricula, qualifications, teaching/ learning requirements and assessment. Formal training is intentional from the learner's perspective.

2.50.2 Non-formal Training: It is the training that is in addition or alternative to formal learning and is also structured but is more flexible. It is provided through community-based settings, the workplace, or through the activities of civil society organisations or any organisation imparting training. This training mode does not have the level of curriculum, syllabus or accreditation and certification associated with formal learning but it is more structured as compared to informal learning.

2.50.3 Informal Training: The training that occurs in daily life, in the family, in the workplace, in communities, and through the interests and activities of individuals. It is not structured (in terms of learning objectives, learning time or learning support) and typically does not lead to certification.

2.50.4 Vocational/technical training other than formal vocational/technical training

(a) Hereditary: The expertise in a vocation or trade is sometimes acquired by the succeeding generations from the other members of the households, generally the ancestors. The expertise gained through significant 'hands-on' experience enables the individual to take up activities in self-employment capacity or makes them employable. Acquiring such marketable expertise by one, which enables him/her to carry out the trade or occupation of their ancestors over generations, was considered to be training through 'hereditary' sources.

(b) Self-learning: The expertise in a vocation or trade when acquired by a person through his/her own effort, without any training under any person or organisation, was considered 'self learning'. For example, a person who has learnt photography on his own effort was considered to have acquired the vocational training through 'self-learning'.

(c) Learning on the job: The expertise acquired by a person while in employment (current and/or past), either through informal training by the employer or organisation or through the exposure to the type of job that he/she is/was performing, was considered as the training through 'learning on the job'. If a person is provided with formal training in a vocation or trade even by the employer or organisation, while in employment, he/she was considered to have received 'formal' vocational/technical training.

(d) Other: The 'other' sources included the cases where the expertise for a vocation or trade was developed from the household members or ancestors, provided that the said vocation or trade was different from the one relating to their ancestors. Similarly, a person may learn tailoring work from a master tailor or a person may learn book-binding work from a printing press. All such expertise acquired was considered as vocational/technical training through 'other' sources.

2.6.51 Field of vocational/technical training: For formal vocational/technical training, field of training was recorded. Fields of training on which information was collected were as follows:

	field of training
1	aerospace and aviation
2	agriculture, non-crop based agriculture, food processing
3	allied manufacturing- gems and jewellery, leather, rubber, furniture and fittings, printing
4	artisan/craftsman/handicraft/creative arts and cottage based production
5	automotive
6	beauty and wellness
7	chemical engineering, hydrocarbons, chemicals and petrochemicals
8	civil engineering- construction, plumbing, paints and coatings
9	electrical, power and electronics
10	healthcare and life sciences
11	hospitality and tourism
12	iron and steel, mining, earthmoving and infra building
13	information Technology-Information Technology Enabled Services (IT-ITeS)
14	logistics
15	mechanical engineering-capital goods, strategic manufacturing
16	media-journalism, mass communication and entertainment
17	office and business related work
18	security
19	telecom
20	textiles and handlooms, apparels
21	work related to childcare, nutrition, pre-school and crèche
99	others

2.6.52 Duration of training: For formal vocational/technical training information on duration of the training was recorded. These were as follows:

duration of training
- less than 3 months
- 3 months or more but less than 6 months
- 6 months or more but less than 12 months
- 12 months or more but less than 18 months
- 18 months or more but less than 24 months
- 24 months or more

If the duration of the training was in days, it was converted into months by considering 30 days as 1 month (rounding off to the nearest highest value, e.g., if the values is 10.1, it was considered as 11) and entry was made accordingly.

2.6.53 Type of training: For formal vocational/technical training, information on type of the vocational/ technical training was recorded as follows:

on the job
other than on the job:
    full-time
    part-time

If training was received while in employment (current and/or past) it was considered as 'on the job'. Remaining cases were considered as 'other than on the job'.

2.6.54 Source of funding the training: For formal vocational/technical training information on source of the vocational/technical training was recorded. These were as follows:

    funded from the earning of the student
    funded by other household members
    funded by erstwhile household members
    received as gifts from friends/relatives
    scholarships from educational institution
    scholarships from government
    scholarships from charitable and other organisations....
    educational loan
    other loan
    others

If more than one source was used for funding the expenditure, the source that accounts for major part of the expenditure was recorded.

2.6.55 Coverage of education to determine whether enrolled and level of current attendance: In this survey for persons of age 3 to 35 years with disability information on enrolment/ attendance, etc., in education was collected. The coverage of 'education' to determine whether enrolled and level of current attendance was as follows:

i) School education:

a) Pre-primary level (i.e., at nursery/Kindergartens/preparatory levels), irrespective of the recognition status of the school. Education at pre-primary level is an early childhood education for young children before commencing primary education.
b) Primary level refers to Classes I-V, irrespective of the recognition status of the school. For this survey, the primary level has been defined as Class I-V for all the States/UTs uniformly.
c) Upper primary/ middle refers to Classes VI-VIII, irrespective of the recognition status of the school.
d) Secondary refers to Classes IX-X and follows the syllabus and pattern of the education as in 'recognised schools'.
e) Higher secondary/Pre-university education refers to Classes XI-XII and follows the syllabus and pattern of the education as in 'recognised schools'. It may be noted that sometimes these are also taught in colleges/open schools.

ii) General education at colleges and Universities (including Open University) that are recognised by University Grant Commission leading to degree/diploma/certificates, etc.

iii) Distance education conducted by Universities, Deemed Universities or Institutions authorized by competent authorities for awarding regular degrees or diplomas or certificates,

iv) Technical or Professional courses, leading to degree/diploma/certificates, conducted by Universities, Deemed Universities, open universities and other institutes authorised by competent authorities like All India Council of Technical Education (AICTE), Medical Council of India (MCI), etc.

Some of these institutes are like, National Institute of Fashion Technology, National School of Drama, Satyajit Ray Film and Television Institute, Film and Television Institute of India, Lok Nayak Jayaprakash Narayan National Institute of Criminology and Forensic Science, etc. or Institutions, The Institute of Chartered Accountants of India, The Institute of Cost and Works Accountants of India, The Institute of Company Secretaries of India, Actuarial Society of India, etc.

v) All types of vocational/technical training courses of duration 4 weeks of more, conducted by institutions recognised by central/state/UTs/local bodies.
The following was not included in the coverage of education:

- Art, music and similar type of courses conducted by individuals in their houses or unrecognised/ unaffiliated institutions,
- Classes taken by Private tutors,

The non-formal system of education (like NFEC/TLC/AEC, etc.) being implemented through various programs by government or other agencies was also considered within the coverage of 'education'.

2.6.56 Pre-school intervention programme: Pre-school intervention refers to any support given to children with disability before they start attending school at primary level. This includes therapies for speech defects or delayed development, stimulation programmes either at home or developmental centres through qualified trainers/therapists. Pre-school interventions did not include attending Play School, Nursery Schools, Balwadis or Anganwadis, which were not specifically designed to take special care for persons with disabilities.

2.6.57 Special School and ordinary school: There are educational institutions for persons with special educational needs arising from a disability. The traditional classroom environment cannot meet the special educational requirements of such persons. This requires special teaching methodology and infrastructure to meet the appropriate needs of such persons which the special schools provide. Examples of special schools are school for blind, school for the deaf, school for cerebral palsy, etc. Ordinary school means a school other than a special school.

2.6.58 Reason for non-enrolment in a special school: Information on non-enrolment in a special school was collected in this survey for the following category of persons:

- category 1: persons who never enrolled in ordinary school and never enrolled in special school
- category 2: persons who ever enrolled in ordinary school but currently not attending in ordinary school and never enrolled in special school

For these household members the reason for non-enrolment in a special school was as follows:

due to disability

school not known
difficulty in getting admission
school far away
expensive
not interested in education
for participation in household
economic activity
for other economic reasons
for attending domestic chores
completed desired level/class
other reasons

If there are multiple reasons, then the major reason as indicated by the respondent was considered as the reason for non-enrolment.

2.6.59 Reason for currently not attending in a special school: Information on reason for currently no attending in a special school was collected for those who ever enrolled in special school but currently not attending in the special school. The reason for currently not attending in special school was as follows

due to disability
school far away
expensive
not interested in education
for participation in household economic activity
for other economic reasons
for attending domestic chores
completed desired level/ class
other reasons

--X--

CHAPTER – 3

TESTING POOLABILITY AND METHODOLOGY FOR POOLING

CHAPTER – 3

TESTING POOLABILITY AND METHODOLOGY FOR POOLING

Introduction

The contents in this chapter on poolability testing and methodology for pooling are as prescribed in "Manual on pooling of Central and State sample data" prepared by NSO. (https://mospi.gov.in/sites/default/files/reports_and_publication/statistical_manual/cso_all_manual/pooling_of_central_and_state_sample_data/Manual_write_up.pdf)

Testing poolability of Central and State sample data

3.1 Though the central sample and state sample are drawn independently following identical sampling design with same concepts, definitions and instructions, the state sample unit level data in some cases are not properly validated. There is also expected agency bias in the two sets of data generated by different agencies. As such they cannot be merged for generating pooled estimate without testing that the samples are realized from identical distribution function. Since the parametric distribution of the sample mean is unknown one may adopt non parametric tests such as Run test, Median test, chi-square test etc. to test that the samples are coming from identical distribution function.

Median test

3.2 In statistics, the median test is a special case of Pearson's Chi-square test. It tests the null hypothesis that the medians of the populations from which two samples are drawn, are identical. Observations in each sample are assigned to two groups, one consisting of data whose values are higher than the median value in the two groups combined, and the other consisting of data whose values are at the median or below. A Pearson's Chi-square test is then used to determine whether the observed frequencies in each group differ from expected frequencies derived from a distribution combining the two groups.

3.3 Let m^* be the median of the pooled sample data. Construct 2 X 2 contingency table as below and use chi-square test to test if State sample and Central sample have identical median.

Sample type	Number of sample observation		Total
	<= m*	> m*	
State Sample	N_{11}	N_{12}	$N_{1.}$
Central Sample	N_{21}	N_{22}	$N_{2.}$
Total	$N_{.1}$	$N_{.2}$	$N_{..}$

Observed frequency of each cell $O_{ij} = N_{ij}$ where i= 1 to 2, j= 1 to 2.

Expected frequency of each cell $E_{ij} = (N_{i.} * N_{.j})/N_{..}$ where i= 1 to 2, j= 1 to 2.

x^2**Value =** $\sum_{i=1}^{2} \quad \sum_{j=1}^{2} (Oij - Eij)^2 / Oij$ **with degrees of freedom = (2-1)*(2-1) = 1**

The statistical power of this test may sometimes be improved by using a value other than the median to define the groups say quintile classes– that is, by using a value which divides the groups into more nearly equal groups than the median would.

Multinomial distribution test or x^2 test

3.4 For discrete data such as status of activity, educational level and categorical variable such as land possessed etc, standard tests of equality of sample proportions of two sets of data based on multinomial distributions, relevant chi-square tests may be used after grouping the attributes/categorical variables into a suitable number of classes so that each class contains adequate number of sample observations. Construct 2 X k contingency table for k classes at the domain where two sets of data are to be pooled as below and use chi-square test if State sample and Central sample have identical distribution.

Sample type	Number of sample observation					Total
	Class - 1	Class - 2	…	Class - k-1	Class - k	
State Sample	N_{11}	N_{12}	…	N_{1k-1}	N_{1k}	$N_{1.}$
Central Sample	N_{21}	N_{22}	…	N_{2k-1}	N_{2k}	$N_{2.}$
Total	$N_{.1}$	$N_{.2}$	…	$N_{.k-1}$	$N_{.k}$	$N_{..}$

Observed frequency of each cell $O_{ij} = N_{ij}$ where i= 1 to 2, j= 1 to k.

Expected frequency of each cell $E_{ij} = (N_{i.} * N_{.j})/N_{..}$ where i= 1 to 2, j= 1 to k.

x^2**Value** = $\sum_{i=1}^{2} \quad \sum_{j=1}^{2} (Oij - Eij)\, 2/O\, ij$ **with degrees of freedom = (2-1)*(k-1) = k-1**

Wald-Wolfowitz run test

3.5 Suppose X and Y are independent random samples with cumulative distribution function (CDF) as $F_s(x)$ and $F_c(y)$. Null Hypothesis to be tested is H_0: $F_s(x) = F_c(x)$ for all x against alternative Hypothesis is H_1: $F_s(x) <= F_c(x)$ for all x and $F_s(x) < F_c(x)$ for some x. Let $x_1, x_2, \ldots, x_m$ be iid observation from state sample with distributive function F_s and $y_1, y_2, \ldots, y_n$ be iid observation from central sample with distributive function F_c. Pool the data and order them with respect to comparable characteristic under consideration say monthly per capita expenditure (MPCE). In the pooled order sequence put "1" for X and "0" for Y. Let U be the total runs observed where 'run' is a sequence of adjacent equal symbols. For example, following sequence: 11110001110011111110000 is divided in six runs, three of them are made out of "1" and the others are made out of "0". The number of runs U is a random variable whose distribution for large sample can be treated as normal with:

$$\text{mean} = \frac{2mn}{m+n} + 1$$

$$\text{variance} = \frac{2mn(2mn-m-\ )}{(m+n)2(m+n-1)}$$

After normalizing the variable U one may use one sided z-test for testing the Null hypothesis. In extreme case the value of U will be 2 meaning by observed characteristic of all the observation of one sample is less than the other samples.

3.6 One of the limitations of this test is when there is a tie between two samples in the observed value. One has to resolve ties in usual manner. However if there is large number of ties which is bound to occur specially for qualitative attributes like education level, activity status etc, this test is not recommended. This test can be well applied for a continuous variable such as MPCE which are less prone to ties. For discrete variable chi-square test is recommended.

Methodology for pooling

Pooling by inverse weight of the variance of the estimates

3.7 **Aggregate estimate**: For any characteristic, consider the state sample [s] in the form of two independent sub- sample s1 and s2 and the central sample [c] in the form of two independent sub-sample c1 and c2. Based on this, the respective estimates for state and central can be computed as:

$t_s = \sum$ (ts1 + ts2)/2 and $t_c = \sum$(tc1 + tc2)/2

Pooled estimate leading to optimum combination of these two estimates is given by weighing with inverse of the variance of the estimate. Thus the pooled estimate is given by:

$$T_p = V(t|C)t_s + \frac{V(t|S)t_c}{V(t|C)+V(t|S)} \text{with} V(T|p) = V(t|C)\frac{V(t|S)}{V(t|C)+V(t|S)}$$

In general and $V(t|C)$and$V(t|s)$are unknown and can be estimated as

$$\hat{V}(T_c) = \sum_l (t_{c1} - t_{c2})^2/4, \hat{V}(T_s) = \sum_l (t_{s1} - t_{s2})^2/4$$

where ∑stands for summing over stratum x sub-stratum level variance at the domain of pooling.

Thus pooled estimate and estimate of pooled variance is given by

$$t_p = \frac{\hat{V}(t_c)t_s + \hat{V}(t_s)t_c}{\hat{V}(t_c) + \hat{V}(t_s)} \hat{V}(t_p) = \frac{\hat{V}(t_c)\hat{V}(t_s)}{\hat{V}(t_c) + \hat{V}(t_s)}$$

3.8 By virtue of weighing the two estimates at the domain level at which two estimates are pooled, the pooled estimate will always lie between the central and state sample estimates.

3.9 **Estimate of rate**: Let r_c and r_s be the estimate of R_c and R_s ie Y/X based on central and state sample respectively with corresponding estimated mean square error mse(r_c) and mse(r_s). The pooled estimate and estimate of variance of pooled ratio estimate may be given by:

$$r_p = \frac{mse(r_c)r_s + mse(r_s)r_c}{mse(r_c)+mse(r_s)}, mse(r|p) = \frac{mse(r_c)mse(r_s)}{mse(r_c)+mse(r_s)}$$

Where $mse(r_c)$ and $mse(r_s)$are calculated using estimation procedure of NSS 66th round. Alternatively one can generate the pooled estimate of aggregate by inverse weight of estimate of

variance obtained from central and state sample using formula given in para 2.1.1 for the characteristics x as well as y and obtain the pooled estimate of ratio as ratio of pooled estimate of aggregate. This will ensure consistency between pooled estimates of aggregate and the pooled estimate of ratio.

3.10 Method laid down in para 2.1.1 and 2.1.2 requires calculation of estimate of variance of the estimates before pooling them. Reliability of estimate of variance should be ascertained with due consideration of sample size. Besides the complex calculations of variances and covariances for each cell of the table, one needs to address the issue of non-additivity of the component estimates with the estimate of marginal total. For e.g. pooled estimate of MPCE of FOOD and NON-FOOD may not add up to MPCE of TOTAL. To obviate this problem one may generate the pooled estimates of components first and then derive the estimate of total as sum of estimates of components.

Pooling by simple average of the estimates

3.11 Many of the States are not fully equipped with complex calculation of estimate of variance especially when cells of the table contains ratio of two characteristics which is usually presented in the NSS reports. When the State's participation is equal matching of central samples, the simple average of two estimates may be a way of combining the estimates considering central and state samples as independent samples. The pooled estimate will always lie between the estimates based on central and state sample separately.

3.12 When the State's participation is of unequal matching of central samples, the weighted average of two estimates with weights being matching ratio of central and state sample may be a better way of combining the estimates considering central and state samples as independent samples. For any characteristic, consider the state sample [s] in the form of two independent sub-sample s1 and s2 and the central sample[c] in the form of two independent subsample c1 and c2. Let matching ratio of state and central sample be m : n. Based on this, the respective estimates for state and central can be computed as:

$t_s = \sum_l (t_{s1} + t_{s2})/2$ and $t_c = \sum_l (t_{c1} + t_{c2})/2$

Pooled estimate of these two estimates is given by weighing with matching participation rate m:n. Thus the pooled estimate is given by:

$t_p = \frac{mt_s+nt_c}{m+n}$ with $V(t|p) = \frac{m^2V(t_s)+n^2V(t_c)}{(m+n)}$

In general $V(t_s)$ and $V(t_c)$ can be estimated as $\hat{V}(t_c) = \sum_l (t_{c1} - t_{c2})^2/4$,

$\hat{V}(t_s) = \sum_l (t_{s1} - t_{s2})^2/4$ and thus $\hat{V}(t_p) = \frac{m^2\hat{V}(t_s)+n^2\hat{V}(t_c)}{(m+n)^2}$

The pooled estimate will always lie between the estimates based on central and state sample separately.

3.13 **Summing up:** For those characteristics which are known to be distributed as Normal, poolability of the two sets of central and state data may be tested by standard parametric tests such as Z-test. For those characteristics for which transformation makes them Normal, such methodology may be adopted. In most of the situations where the distribution is non-normal and unknown, the

two sets of data may be tested through various non-parametric tests such as those laid down above. For discrete data, Standard tests of equality of proportions based on binomial distribution may be used and for multinomial distributions relevant chi-square tests may be used.

----x----

CHAPTER – 4

POOLABILITY TEST RESULTS

CHAPTER – 4

POOLABILITY TEST RESULTS

Poolability test

4.1 Though the central sample and state sample are drawn independently following identical sampling design with same concepts, definitions and instructions to collect the state sample data, there is also expected agency bias in the two sets of data generated by different agencies. As such they cannot be merged for generating pooled estimate without testing that the samples are realized from identical distribution function. Since the parametric distribution of the sample mean is unknown, non-parametric tests such Run test and chi-square test are adopted to test that the samples are coming from identical distribution function.

Parameters Considered for Pooling

4.2 In NSS 76th round, DES, GoM has collected information on 'Survey of persons with disability', during the period July 2018- December 2018. The NSS data cannot be used directly to produce reliable estimates at the district level due to small sample sizes. Pooling of Central and State sample data is one of the important ways to solve the problem of inadequate sample size for releasing district level estimates. By pooling NSS 76th round Central and State data estimates of some key indicators at the district level have been derived and are presented in this report. Considering the small sample size at district level following broad parameters were considered for pooling

- Distribution of disabled persons by age group
- Literacy rate among persons with disabilities of age 7 years and above
- Distribution of persons with disability by status of treatment taken
- Persons with disabilities incurring out-of-pocket expenses and average monthly out-of-pocket expenses
- Distribution of persons of age group 15 years and above by activity status in usual status (ps+ss)

Methodology of pooling:

4.3 Two alternate methods are used for pooling the Central and State sample data.

a **Weighting by Matching ratio:** Building aggregate estimate of pooled sample in proportion matching ratio m:n of Central and State sample aggregate estimate where m and n are the allotted sample for Central and State sample separately for rural and urban sector. Building ratio estimate of pooled sample as ratio of aggregate estimates.

b **Weighting by inverse of variance:** Ratio estimates are built by weighting the ratio estimate of Central and State sample in proportion to inverse of variance of ratio of the Central and State sample.

4.4 Chi-square test was done for the variable 'broad type of disability'. Run test (one sided) was done over 'Average monthly out-of-pocket expenses per person with disability who incurred out-of-pocket expenses on disability (₹)' for testing the poolability of central and state sample data for rural and urban areas. District wise Poolability test results are presented below.

Tables generated

4.5.1 Following Tables are generated for testing the poolability of State and Central sample data.

a District wise result of chi-square test of number disabled persons by broad type of disability

b District wise result of chi-square test of number disabled persons by age-group

c District wise result of run test of Average monthly out-of-pocket expenses per person with disability who incurred out-of-pocket expenses on disability (₹)

4.5.2 Following Tables are generated pertaining to the estimation of different parameters and their RSEs;

a Percentage distribution of persons by broad type of disability for each age group

b Literacy rate (in per cent) of persons of age 7 years and above

c Percentage of persons with disability by status of treatment taken for different broad type of disability

d Percentage of persons with disabilities incurring out-of-pocket expenses and average monthly out-of-pocket expenses (₹) per person with disability

e Percentage distribution of persons of age group 15 years and above with different broad type of disability by activity status in usual status (ps+ss)

4.5.3 For reliability of results, district level Relative Standard Error (RSE) has been estimated for different indicators like status of treatment taken, average monthly out-of-pocket expenses etc. for both rural and urban areas (given in Chapter-7). **The users should cautiously use the district level result where poolabilty test is not satisfied and RSE is more than 30 per cent.**

CHAPTER-5

Summary Findings

CHAPTER – 5

Summary of Findings

5.1 Introduction

5.1.1 In the NSS 76th round, the information of Persons with disabilities i.e. prevalence of disability, percentage of persons with disabilities by age group, literacy rate among persons with disability, age at onset of disability, status of treatment for disability, employment and unemployment among persons of age 15 years and above with disability in usual status (ps+ss), out-of-pocket expenses relating to disability etc. were covered. Matching Ratio (MR) method is used for estimating various regional/ district level pooled results.

5.2 Revenue Regions in the state and their composition

Sr. No.	Region	Districts
1	Konkan	1)Thane, 2) Mumbai Suburban, 3) Mumbai, 4) Raigad, 5) Ratnagiri, 6) Sindhudurg
2	Nashik	1) Nashik, 2) Dhule , 3) Nandurbar, 4) Jalgaon, 5)Ahmednagar
3	Pune	1) Pune, 2) Satara, 3) Sangli, 4) Solapur, 5) Kolhapur
4	Aurangabad	1) Aurangabad, 2) Nanded, 3) Hingoli, 4) Parbhani, 5) Jalna, 6) Beed, 7) Latur, 8) Osmanabad
5	Amaravti	1) Amravati, 2) Buldana, 3) Akola, 4) Washim, 5) Yavatmal
6	Nagpur	1) Nagpur, 2) Bhandara, 3) Gondia, 4) Chandrapur, 5) Gadchiroli, 6) Wardha

5.3 Percentage of persons with disability

5.3.1 According to the sample received, persons with disability were found more in rural areas (2.1 per cent) than in urban areas (1.6 per cent)

Table 1: Percentage of persons with disability in the population

Region	Rural	Urban	State

5.5 Percentage distribution of persons with disability by broad group of disability

5.5.1 Table 3 illustrates region wise percentage of persons with broad type of disability. Percentage of locomotor disabled persons was more in Nagpur region (i.e. 1.5 per cent) than all regions.

Table 3: Regionwise percentage of persons with broad type of disability							
Broad type disability	**Konkan**	**Pune**	**Nashik**	**Aurangabad**	**Amravati**	**Nagpur**	**State**
Rural							
Locomotor disability	1.2	1.3	1.1	1.6	1.4	1.7	1.3

Any disability	1.6	1.8	1.6	2.4	2.3	2.4	1.9

Note: For any broad type of disability, say, locomotor disability, the persons with locomotor disability has been considered irrespective of whether he/she has other broad type of disabilities or not. Similarly, for the remaining broad type of disabilities

5.6 Literacy rate among persons with disability

5.6.1 Literacy rate among persons with disability of age 7 years and above is given in the table 4. Literacy rate among disabled persons of age 7 years and above for Maharashtra State was about 66 per cent. This percentage was maximum in Konkan region (75.0 per cent) and minimum in Aurangabad region (53.0 per cent).

Table 4: Literacy rate among persons with disability of age 7 years and above	
Region	**State**
Konkan	75.0
Pune	64.7
Nashik	63.5
Aurangabad	53.0
Amravati	72.2
Nagpur	70.1
State	**66.1**

5.7 Age at onset of disability

5.7.1 Broad type of disability wise percentage distribution of disabled persons for each age group is given in Table 5. Onset of disability by birth was found more for 'Mental retardation/Intellectual', 'Speech & Language' and 'hearing disability'.

Table 5: Percentage distribution of persons with disability by age at onset of disability for each age-group and broad type of disability

Region	Broad type of disability	Age (group) at onset of disability (years)						Sample persons
		by birth	0-4	5-14	15-59	60 and above	all

5.8 Treatment for disability

5.8.1 Percentage distribution of persons with disability by status of treatment taken for disability is given in the table 6. It is observed that about 90 per cent disabled persons reported as 'taken/ undergoing treatment'.

Table 6: Percentage of persons with disability by status of treatment taken					
Region	**Treatment taken/ Undergoing treatment**	**Did not take treatment**	**Reason for not taking treatment**		
			cannot afford	**not available**	**not required**
Konkan	98.6	4.7	1.3	0.7	2.8
Pune	87.2	13.1	5.3	3.1	4.7
Nashik	90.1	9.8	6.8	0.6	2.4
Aurangabad	85.1	14.4	6.0	1.5	7.0
Amravati	89.7	12.1	6.2	2.5	3.4
Nagpur	89.7	10.7	4.6	0.8	5.3
State	**90.1**	**10.8**	**4.8**	**1.6**	**4.4**

Note: 1. If a person had more than one type of disability and 'status of treatment taken' for different types of disabilities were different, the person was considered against each of such 'status of treatment taken' separately. For each type of locomotor disability, information on 'status of treatment taken' was collected separately and for each such disability, information on one 'status of treatment taken' was collected.
2. If a person had more than one type of disability but 'status of treatment taken' for each of such disability was same, the person was considered only once against that 'status of treatment taken'.
3. If a person had only one type of disability, the person was considered against that 'status of treatment taken' reported by the person.

5.8.2 Percentage of persons with disability attending special school/special therapy for different broad type of disability is given in Table 7. It is observed that two per cent persons with 'Speech and language disability' were attending special school/ special therapy.

Table 7: Percentage of persons with disability attending special school/special therapy for different broad type of disability

Broad type of disability	Konkan	Pune	Nashik	Aurangabad	Amravati	Nagpur	State
Locomotor disability	0.1	0.3	0.4	0.3	0.1	0.1	0.2
Visual disability	0.0	5.8	0.4	0.5	0.6	0.0	1.8
Hearing disability	0.7	0.7	0.7	0.5	0.7	0.0	0.6
Speech and language disability	1.9	0.5	0.3	0.5	0.9	11.3	2.0
Mental retardation/ Intellectual disability	0.3	0.2	0.4	0.0	0.0	11.0	1.7
Other type of disability	1.0	1.6	0.0	0.0	0.0	0.3	0.5
Any disability	0.3	0.9	0.4	0.4	0.3	1.8	0.7

Note- For whether treatment taken/undergoing treatment if more than one of the codes 1 to 5 was applicable for a household member, the code among the codes 1 to 5 which was considered most important for the disability was reported. (treatment taken: consulting doctor-1, otherwise-2; undergoing treatment: consulting doctor-3, otherwise-4; attending special school/special therapy-5)

5.9 Indicators of employment and unemployment

5.9.1 Labour Force Participation Rate (LFPR) among persons of age 15 years and above with disability in usual status (ps+ss) is given in Table 8. Labour Force Participation Rate (LFPR in per cent) among females with disabilities was much lower than that for males in all regions.

Table 8: Labour Force Participation Rate (LFPR) among persons of age 15 years and above with disability in usual status (ps+ss)

Region	Rural		Urban		Rural+ Urban	
	Male	Female	Male	Female	Male	Female
Konkan	47.9	6.3	31.1	7.7	35.7	7.3
Pune	35.9	10.4	33.4	9.3	35.2	10.0
Nashik	37.5	11.3	38.1	11.2	37.6	11.2
Aurangabad	37.0	13.1	26.5	7.2	34.8	11.8
Amravati	33.2	11.4	34.8	9.3	33.5	10.8
Nagpur	33.1	14.1	25.9	12.8	30.6	13.8
State	**36.6**	**11.6**	**31.2**	**9.0**	**34.7**	**10.6**

Note: Usual status (ps+ss) is determined considering usual principal status and subsidiary economic activities together

5.9.2 Worker Population Ratio (WPR) among persons of age 15 years and above with disability in usual status (ps+ss) is given in Table 9. Worker Population Ratio (WPR) among males and females were 33.7 per cent and 9.9 per cent respectively.

Table 9: Worker Population Ratio (WPR) among persons of age 15 years and above with disability in usual status (ps+ss)

Region	Rural		Urban		Rural+ Urban	
	Male	Female	Male	Female	Male	Female
Konkan	46.7	5.4	29.8	7.6	34.5	7.0
Pune	34.5	9.3	31.8	7.2	33.7	8.6
Nashik	36.3	11.0	37.3	11.2	36.5	11.0
Aurangabad	36.6	12.8	25.8	5.6	34.3	11.2
Amravati	32.8	11.2	32.8	7.5	32.7	10.3
Nagpur	32.5	13.9	24.6	11.4	29.7	13.2
State	**35.7**	**11.1**	**30.0**	**8.1**	**33.7**	**9.9**

5.10 Out-of-pocket expenditure on disability

5.10.1 Percentage of persons with disability incurring out-of-pocket expenses is given in Table 10. About 29 per cent disabled persons from rural areas and 44 per cent disabled persons from urban areas were reported out-of-pocket expenses.

Table 10: Percentage of persons with disability incurring out-of-pocket expenses

Region	Rural	Urban	State
Konkan	36.4	54.9	50.1
Pune	31.8	41.0	34.5
Nashik	23.9	35.3	26.8
Aurangabad	21.6	26.4	22.7
Amravati	27.1	32.9	28.5
Nagpur	38.1	40.2	38.8
State	**28.7**	**43.7**	**34.2**

5.10.2 Average monthly out-of-pocket expenses per person with disability who incurred out-of-pocket expenses on disability is given in Table 11. Average monthly per person's out-of-pocket expenses on disability was more in urban areas (₹3,998) than that in rural areas (₹2,667).

Table 11: Average monthly out-of-pocket expenses per person with disability who incurred out-of-pocket expenses on disability (₹)

Region	Rural	Urban	State
Konkan	8,180	4,526	5,224
Pune	2,305	4,055	2,905
Nashik	1,802	2,720	2,112
Aurangabad	2,089	3,425	2,433
Amravati	2,576	3,334	2,775
Nagpur	1,343	3,208	2,025
State	**2,667**	**3,998**	**3,285**

Note: Average monthly out-of-pocket expenses per person due to disability= {(infrequent medical expenditure during last 365 days + infrequent non-medical expenditure during last 365 days)/12]+ (usual monthly medical expenditure + usual monthly non-medical expenditure)}/(total number of persons with disability reporting out-of-pocket expenditure on disability)

5.11 Certificate of disability

5.11.1 Percentage persons with disability having certificate of disability is given in Table 12. About 33 per cent disabled persons from rural areas and 31 per cent disabled persons from urban areas were having certificate of disability.

Table 12: Percentage persons with disability having certificate of disability

Region	Rural	Urban	Rural+ urban
Konkan	28.7	22.0	23.8
Pune	40.5	35.9	39.2
Nashik	35.5	42.2	37.3
Aurangabad	24.1	27.0	24.7
Amravati	39.0	40.3	39.3
Nagpur	26.1	39.4	30.8
State	**32.6**	**30.7**	**31.9**

5.12 Difficulties faced in accessing/using public transport

5.12.1 Percentage distribution of persons with disability by difficulties faced in accessing/ using public transport is given in Table 13. Percentage of persons with disability using public transport was found more in Amravati region (69.4 per cent) followed by Nashik region (65.5 per cent). About 40 per cent disabled persons reported difficulty faced due to steps/stairs and non-availability of ramp, grooved tiles or lift. Also, 33 percent persons with disability using public transport reported 'no difficulty faced'.

Table 13: Percentage distribution of persons with disability by difficulties faced in accessing/ using public transport

Region	percentage of persons with disability using public transport	Difficulty faced in accessing public transport								No difficulty faced	All
		Due to steps/ stairs and non-availability of ramp, grooved tiles or lift	In opening doors	No seating arrange-ment in the public transport	No seating arrange-ment at bus stops, stations, etc.	No special toilet seats	No sign for direction/ instruction/ no public announce ment system	Others	Any difficulty faced		
Konkan	59.3	50.4	3.3	1.4	3.9	0.3	5.1	7.9	72.3	27.7	100

5.13 Difficulties faced in accessing/using public building

5.13.1 Percentage distribution of persons with disability by difficulties faced in accessing public building is given in Table 14. About 46 per cent persons with disability were reported having accessed public building. About 41 per cent disabled persons reported difficulty faced due to steps/stairs and non-availability of ramp, grooved tiles or lift.

Table 14: Percentage distribution of persons with disability by difficulty faced in accessing public building

Region	Percentage of persons with disability accessing public building	Difficulty faced in accessing public building								No difficulty faced	All
		Due to steps/ stairs and non-availability of ramp, grooved tiles or lift	In opening doors	No seating arrangement in the waiting area	No seating arrangement at the point of receiving service	No special toilet seats	No sign for direction/ instruction/ no public announcement system	Others	Any difficulty faced

CHAPTER-6

RELATIVE STANDARD ERROR (RSE)

CHAPTER – 6

RELATIVE STANDARD ERROR (RSE)

6.1 All the estimates derived in this report are based on the data collected from the randomly selected sample households of sample villages/urban blocks. Hence, the derived estimates consist of both sampling and non-sampling error.

6.2 The Relative Standard Error (RSE) measures the extent to which a sample survey estimate is likely to deviate from the true population. The Relative Standard Error (RSE) is the standard error expressed as a fraction of the estimate and is usually displayed as a percentage. The measure is also called as co-efficient of variation (%). Estimates with less RSE are reliable and more RSE are subject to high sampling error and should be used with caution.

6.3 Relative Standard Error (RSE) in percentage (%) using Matching Ratio (MR) method on various district level pooled results has been estimated for both rural and urban areas given in Chapter-7. The detail formulae for Estimates of Relative Standard Error (RSE) are given in Chapter - 2

6.4 Distribution of districts by range of RSE for persons with disability is given in Table 6.1

Table: 6.1 Distribution of districts by range of RSE for persons with disability

Sector	<=5%	5-10%	10-15%	15-20%	20-25%	25-30%	>30%	Total
Rural	0	5	8	5	3	8	4	33
Urban	0	6	8	7	5	4	4	34
Rural+ Urban	0	9	8	7	4	4	2	34

6.5 Distribution of districts by range of RSE for status of treatment taken for disability is given in Table 6.2

Table: 6.2 Distribution of districts by range of RSE for status of treatment taken for disability

Status of treatment taken	<=5%	5-10%	10-15%	15-20%	20-25%	25-30%	>30%	Total
Rural								
Treatment taken/ undergoing	1	0	0	0	0	0	32	33

Not in labour force	19	11	1	3	0	0	0	34

Conclusion

6.8 This report is based on the estimates obtained from pooled data of state and central sample. Attempts have been made to derive district level reliable results using scientific procedure. For reliability of results, district level Relative Standard Error (RSE) has been estimated for different indicators like status of treatment taken, average monthly out-of-pocket expenses etc. for both rural and urban areas (given in Chapter-7). **The users should cautiously use the district level results where poolabilty test is not satisfied and RSE is more than 30%.**

CHAPTER – 7
